## Chemistry

## Chapter 1

## Chemical Foundations

## Section 1.3 Units of Measurement

## The Fundamental SI Units

Physical Quantity
Mass
Length
Time
Temperature
Electric current
Amount of substance
Luminous intensity

Name of Unit
Abbreviation
kilogram meter m
second S
kelvin
ampere
mole
candela

## Section 1.3 Units of Measurement

## Prefixes Used in the SI System

- Prefixes are used to change the size of the unit.

Table 1.2 | Prefixes Used in the SI System (The most commonly encountered are shown in blue.)

| Prefix | Symbol | Meaning | Exponential <br> Notation |
| :--- | :--- | ---: | :--- |
| exa | E | $1,000,000,000,000,000,000$ | $10^{18}$ |
| peta | P | $1,000,000,000,000,000$ | $10^{15}$ |
| tera | T | $1,000,000,000,000$ | $10^{12}$ |
| giga | G | $1,000,000,000$ | $10^{9}$ |
| mega | M | $1,000,000$ | $10^{6}$ |
| kilo | k | 1,000 | $10^{3}$ |
| hecto | h | 100 | $10^{2}$ |
| deka | da | 10 | $10^{1}$ |
| - | - | 1 | $10^{0}$ |

## Section 1.3 <br> Units of Measurement

## Exponential Notation (scientific notation)

- Example 5000.: 5.000×103 4 S.F
- $5000: 5 \times 10^{3}$
- $381000000000000000=3.81 \times 10^{17}$
- $0.000000000914=9.14 \times 10^{-10}$
- 5.00×103 3 S.F
- 300. written as $3.00 \times 10^{2}$
- Contains three significant figures.
- Two Advantages
- Number of significant figures can be easily indicated.

## Section 1.3

Units of Measurement

Exponential Notation and Significant Figures:

- 90000
- 90000. 
- $9.0000 \times 10^{4}$
- $9.0 \times 10^{4}$
- 9.00X104
- 65100000000000000
- 0.00000000000002710
- ( ) x $10^{x}$

$$
\begin{gathered}
1 \text { S.F } \\
5 \text { S.F } \\
5 \text { S.F } \\
2 \text { S.F } \\
3 \text { S.F }
\end{gathered}
$$

$6.51 \times 10^{15}$
3 S.F
$2.710 \times 10^{-17}$
4 S.F

## Section 1.5

## Significant Figures and Calculations

Measurement of Volume Using a Buret

- The volume is read at the bottom of the liquid curve (meniscus).
- Meniscus of the liquid occurs at about 20.15 mL .
- Certain digits:20.15
- Uncertain digit: 20.15

## Section 1.5

## Significant Figures and Calculations

Rules for Counting Significant Figures

1. Nonzero integers always count as significant figures.

- 3456 has 4 sig figs (significant figures).

300000

## Section 1.5

Significant Figures and Calculations
Rules for Counting Significant Figures
2. There are three classes of zeros.
a. Leading zeros are zeros that precede all the nonzero digits. These do not count as significant figures.

- 0.0000048 has 2 sig figs.

## Section 1.5

## Significant Figures and Calculations

Rules for Counting Significant Figures
b. Captive zeros are zeros between nonzero digits. These always count as significant figures.

- 16.07 has 4 sig figs.
- 0.008073 s.f.
- 2.000020019 s.f.

## Section 1.5

## Significant Figures and Calculations

Rules for Counting Significant Figures
c. Trailing zeros are zeros at the right end of the number. They are significant only if the number contains a decimal point.

- 9.300 has 4 sig figs.
- 150 has 2 sig figs.
- 231000003 s.f.
- 4100700005 s.f.
- 4.100700009 s.f.
$50 \cap \quad 2 c f$

# Section 1.4 <br> Uncertainty in Measurement 

## Precision and Accuracy

## Accuracy

- Nearness of the measurements to the true value.

## Precision

- Nearness of the measurements to each other.

## Section 1.4

## Uncertainty in Measurement

## Precision versus Accuracy

Neither accurate nor precise.

- Cengage Learning. All Rights Reserved.

Precise but not accurate.

## Section 1.8 <br> Temperature

Three Systems for Measuring Temperature

- Fahrenheit

Celsius
Kelvin

## Section 1.8

## Temperature

## The Three Major Temperature Scales

## Section 1.8

## Temperature

Converting Between Scales

$$
\begin{array}{ll}
T_{\mathrm{K}}=T_{\mathrm{C}}+273.15 & T_{\mathrm{C}}=T_{\mathrm{K}}-273.15 \\
T_{\mathrm{C}}=\left(T_{\mathrm{F}}-32^{\circ} \mathrm{F}\right) \frac{5^{\circ} \mathrm{C}}{9^{\circ} \mathrm{F}} & T_{\mathrm{F}}=T_{\mathrm{C}} \times \frac{9^{\circ} \mathrm{F}}{5^{\circ} \mathrm{C}}+32^{\circ} \mathrm{F}
\end{array}
$$

## Section 1.8

Temperature

## Example

- What is the F equivalent of $35^{\circ} \mathrm{C}$ ?
$35{ }^{\circ} \mathrm{C} \times 9 / 5+32=95^{\circ} \mathrm{F}$
- What is the equivalent of $151^{\circ} \mathrm{F}$ in K ?

First convert into ${ }^{\circ} \mathrm{C}$ then to K .
${ }^{\circ} \mathrm{C}: \quad(151-32) \times 5 / 9=66.1^{\circ} \mathrm{C}$
K: $\quad 66.1+273.15=339.3 \mathrm{~K}$

## Section 1.8 <br> Temperature

## EXERCISE!

At what temperature does ${ }^{\circ} \mathrm{C}={ }^{\circ} \mathrm{F}$ ?

## Section 1.8 <br> Temperature

## EXERCISE!

- Since $^{\circ}$ C equals ${ }^{\circ}$ F, they both should be the same value (designated as variable $x$ ).
- Use one of the conversion equations such as:

$$
T_{\mathrm{C}}=\left(T_{\mathrm{F}}-32^{\circ} \mathrm{F}\right) \frac{5^{\circ} \mathrm{C}}{9^{\circ} \mathrm{F}}
$$

- Substitute in the value of $x$ for both $T_{\mathrm{C}}$ and $T_{\mathrm{F}}$. Solve for $x$.

## Section 1.8

Temperature

## EXERCISE!

$$
\begin{aligned}
T_{\mathrm{C}} & =\left(T_{\mathrm{F}}-32^{\circ} \mathrm{F}\right) \frac{5^{\circ} \mathrm{C}}{9^{\circ} \mathrm{F}} \\
x & =\left(x-32^{\circ} \mathrm{F}\right) \frac{5^{\circ} \mathrm{C}}{9^{\circ} \mathrm{F}} \\
x & =-40
\end{aligned}
$$

$$
\text { So }-40^{\circ} \mathrm{C}=-40^{\circ} \mathrm{F}
$$
