1. Which of the following pairs is mismatched ?

- **Flucloxacillin - atypical pneumonia**

(Explanation: Atypical pneumonia is caused by organisms that either lack a cell wall or have cell walls that beta-lactams cannot target effectively, so beta-lactams aren't an effective treatment.)

2. Which of the following drugs is not commonly used to treat community-acquired pneumonia?

- A) Amoxicillin
- B) Azithromycin
- C) Levofloxacin
- D) Tetracycline

Answer: D

3. All of the following are drugs used in acute bronchitis except:

- A) Clarythromycin
- B) Amphotericin B
- C) Erythromycin
- D) Trimethoprim sulfamethoxazole

Answer: B

4. Which of the following conditions can co-trimoxazole be used to treat?

- A) Otitis media
- B) Sinusitis
- C) Pharyngitis
- D) Acute bronchitis

Answer: B
