ANATOMY 13

1. What is the continuation of the external iliac artery?
(A) Profunda femoris artery
(B) Femoral artery
(C) Obturator artery
(D) Popliteal artery
2. Where is the femoral artery palpated in the lower limb?
(A) Adjacent to the medial malleolus
(B) Inferior to the midinguinal point
(C) Through the popliteal fossa
(D) Along the medial side of the leg
3. Through which anatomical structure does the obturator artery enter the thigh?
(A) Femoral triangle
(B) Obturator foramen
(C) Femoral sheath
(D) Adductor canal
4. Which compartment of the thigh is primarily supplied by the profunda femoris artery?
(A) Posterior compartment
(B) Anterior compartment
(C) Medial compartment
(D) all of the above
5. Which arteries are given off by the profunda femoris artery to supply the head of the femur?
(A) Fibular and anterior tibial arteries
(B) Medial and lateral circumflex femoral arteries
(C) Anterior and posterior tibial arteries
(D) Obturator and popliteal arteries
6. What forms the continuation of the femoral artery in the lower limb?
(A) Dorsalis pedis artery
(B) Anterior tibial artery
(C) Popliteal artery
(D) Posterior tibial artery

Answers:

1. B Femoral artery
2. B Inferior to the midinguinal point
3. B
4. D
5. B Medial and lateral circumflex femoral arteries
6. C Popliteal artery
