

Abdominal compartment seminar wareed

تبييض

- Abdominal perfusion pressure _app : minimum pressure require for good perfusion (good blood flow)

APP : MAP_IAP

Normal IAP : 5_7

Normal APP : 50_60

**Classification :

1 : intra abdominal causes : pancreatitis , trauma, perforation

2: out side abdomen: massive fluid resuscitation , sepsis

3 : chronic : ascitis , liver cirrhosis

*VILI: ventilatory induced lung injury

*On x rays

Elevated hemidiaphragm , ap\lat ratio <0.8

*Gold standered for preesure evaluation: intravesicle pressure

*increase ventilatory requirements:

- compartment syndrome
ما بتحسن abg و برضو peak volume و o2 كل يوم برفع
