MUSCLES OF THE PECTORAL REGION

اليوتيوب د. يوسف حسين

- **Pectoral region is the region in front of the upper part of the chest, its Muscles connecting the chest wall to the arm.**

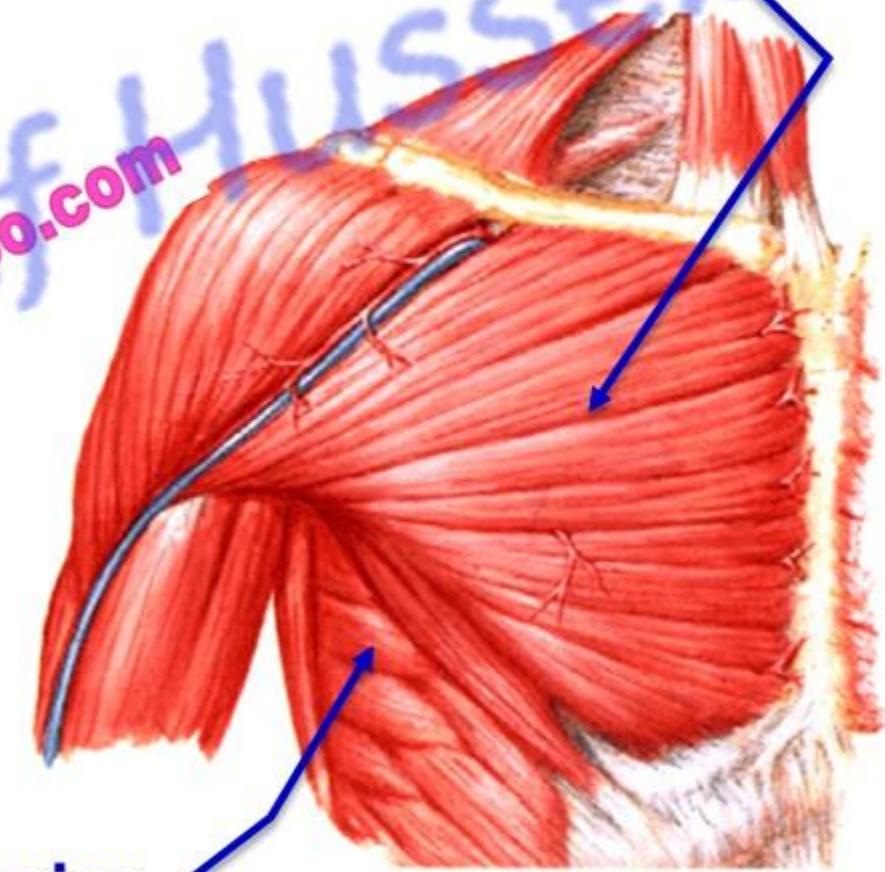

Muscles of the Pectoral region

Subclavius

Pectoralis minor

Pectoralis major

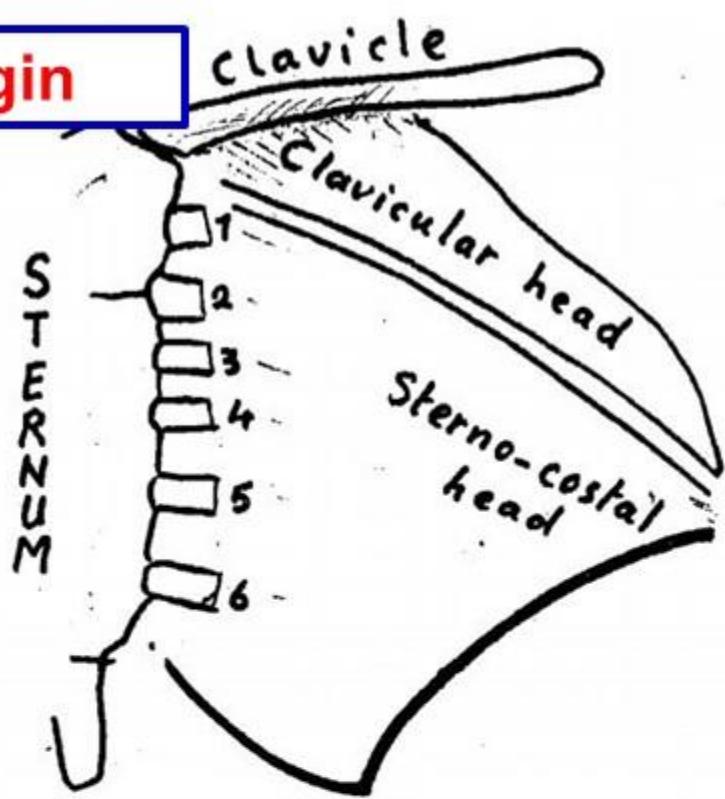

Serratus anterior

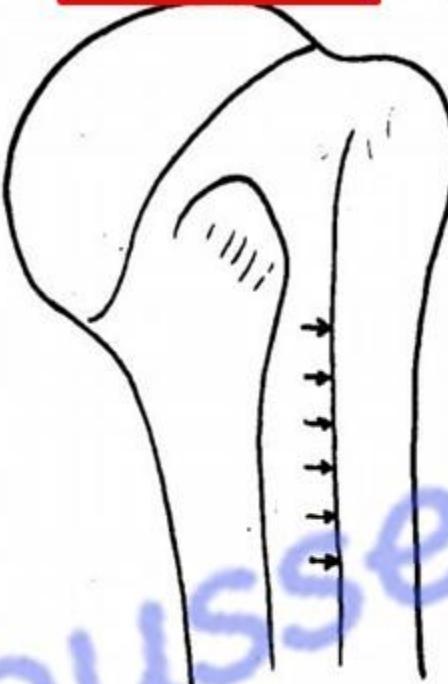

Pectoralis Major muscle

اليوتيوب د. يوسف حسين

Origin

Insertion

dr_youssefhussein@yahoo.com

Lateral lip of the
bicipital groove

* Origin: by two heads:

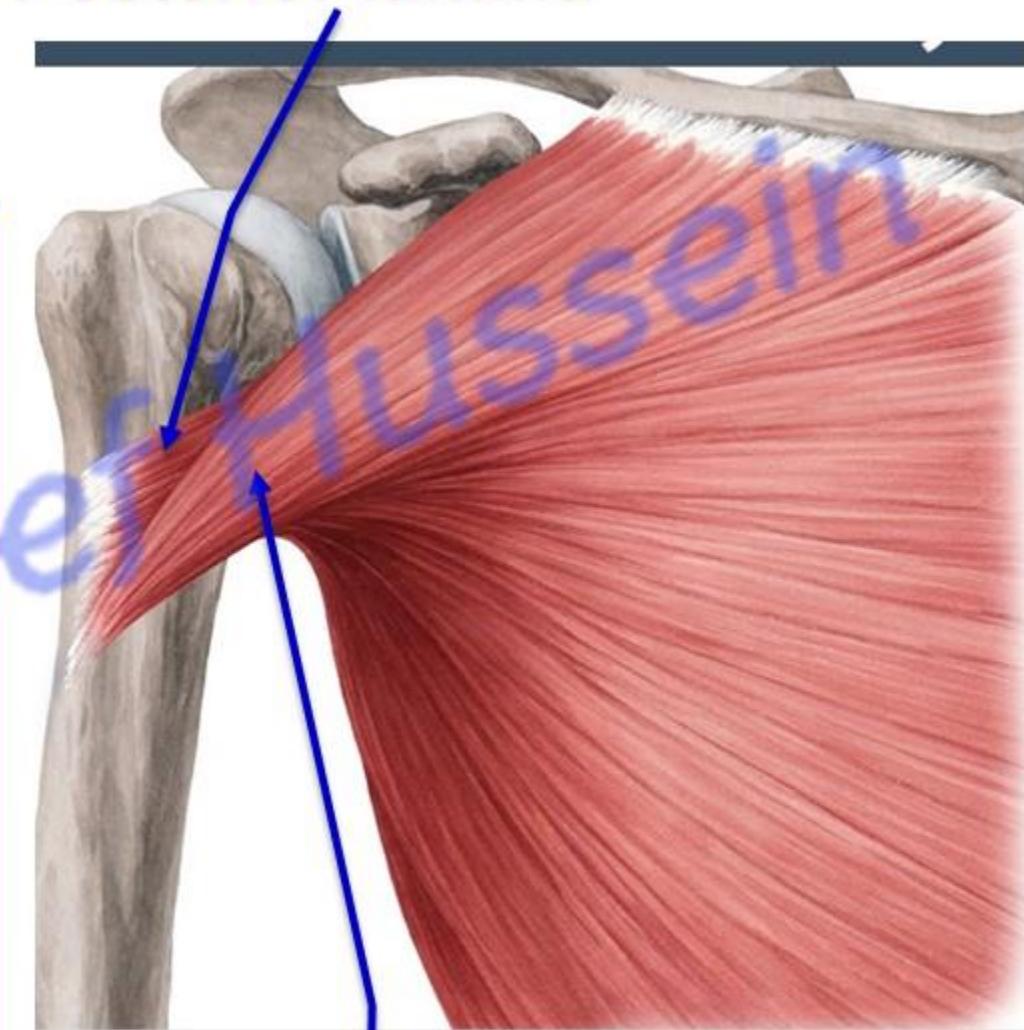

A) **Clavicular head:** from anterior surface of the medial 1/2 of the clavicle.

B) **Sternocostal head:** 1) anterior surface of the sternum.
2) Upper 6 costal cartilages.
3) External abdominal oblique aponeurosis.

Pectoralis major muscle

- 1- The **upper fibers** are **twisted** and inserted **downward** forming the anterior lamina.
 - 2- The **lower fibers** are **twisted** and inserted **upward** forming the posterior lamina.
- **SO** the anterior fold of the axilla is **higher than** the posterior fold

Posterior lamina

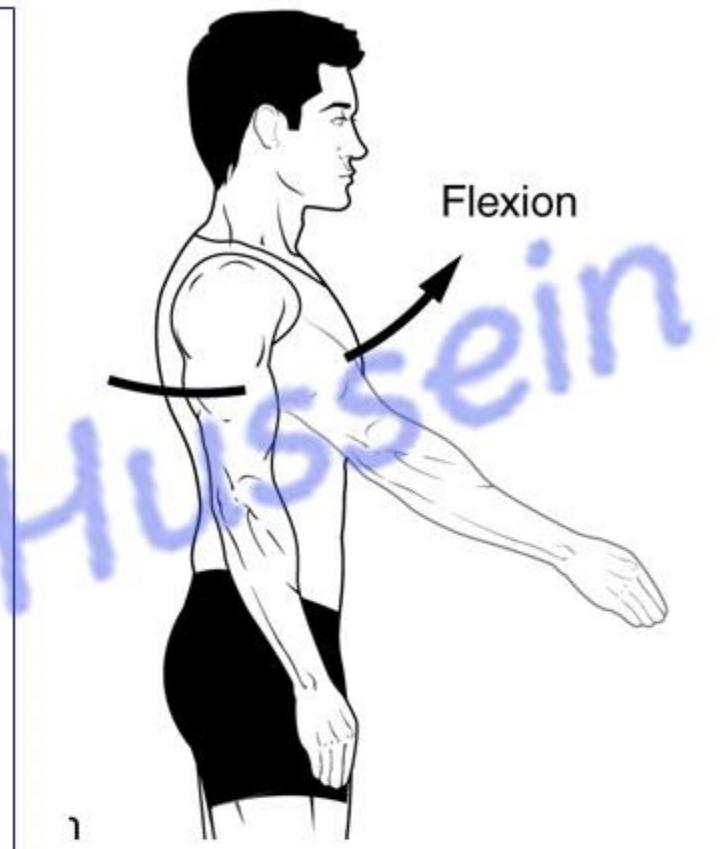

Anterior lamina

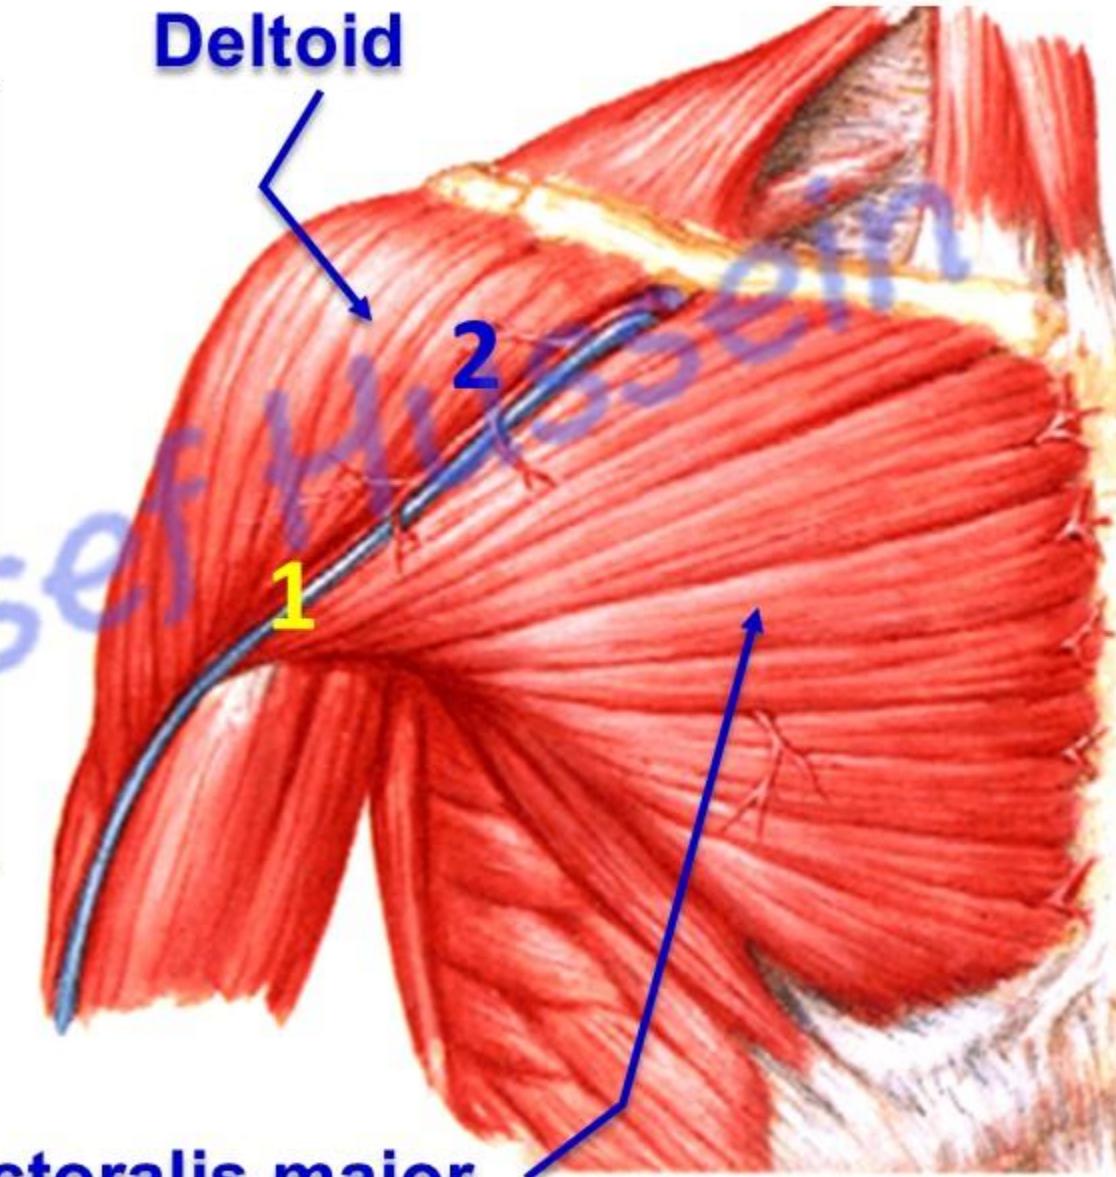

- **Nerve supply (double):** Lateral pectoral nerve (C5,6,7) and medial pectoral nerve (C8,T1).
- It is the **only muscle** of the upper limb supplied by 5 segments from brachial plexus.

* Actions:

- 1- Adduction and medial rotation of the arm.
- 2- Flexion of the arm by **clavicular head**.
- 3- Elevates the ribs during deep inspiration.
- 4- Sternocostal part** acts together with latissimus dorsi, teres major and deltoid: **draw the trunk up during climbing and gymnastic.**

- **Deltpectoral groove** between deltoid and pectoralis major containing:
 - 1- Cephalic Vein.
 - 2- Deltoid branch of thoracoacromial Artery.

Pectoralis minor

Coracoid process

Pectoralis minor muscle

* **Origin:** from the 3rd, 4th and 5th ribs.

* **Insertion:** superior surface of the coracoid process.

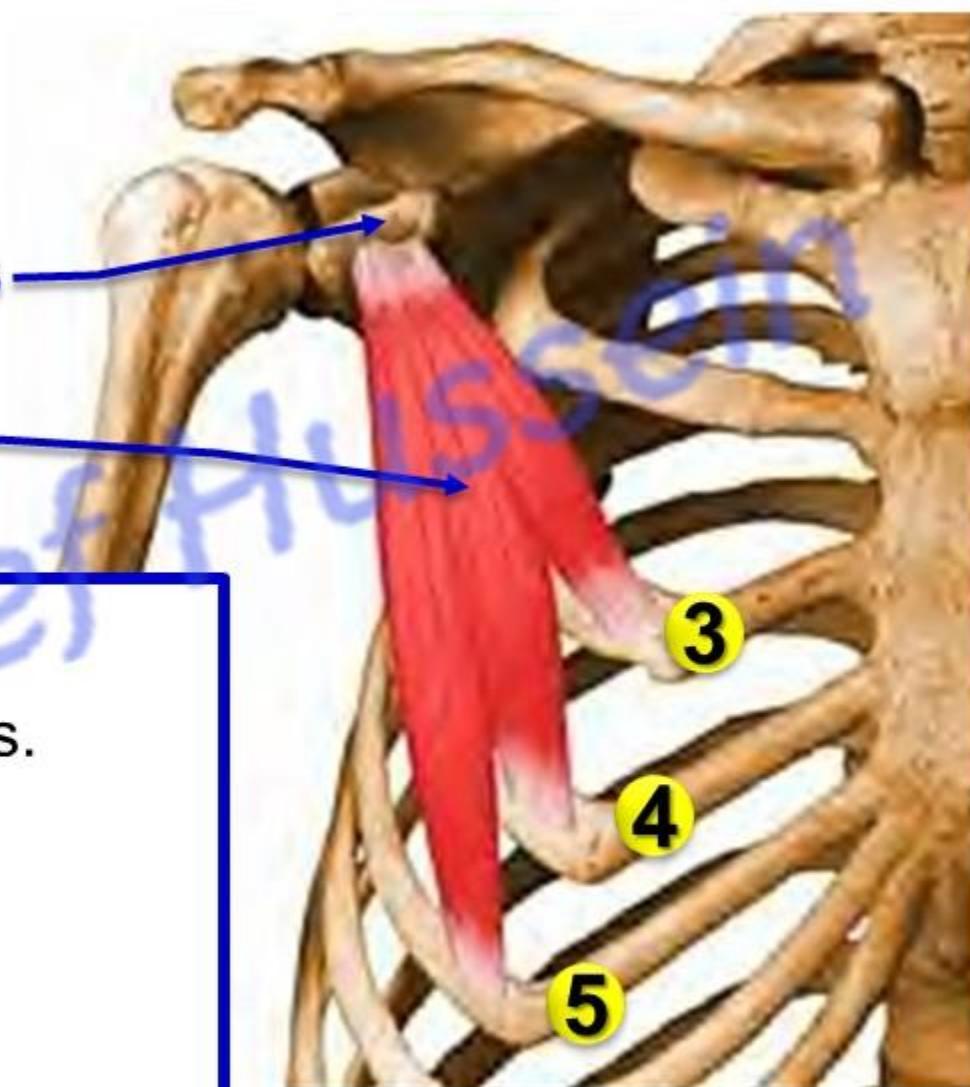

* **Nerve supply:** medial pectoral nerve.

- **Actions:**

- 1) Protraction the scapula (forward movement).

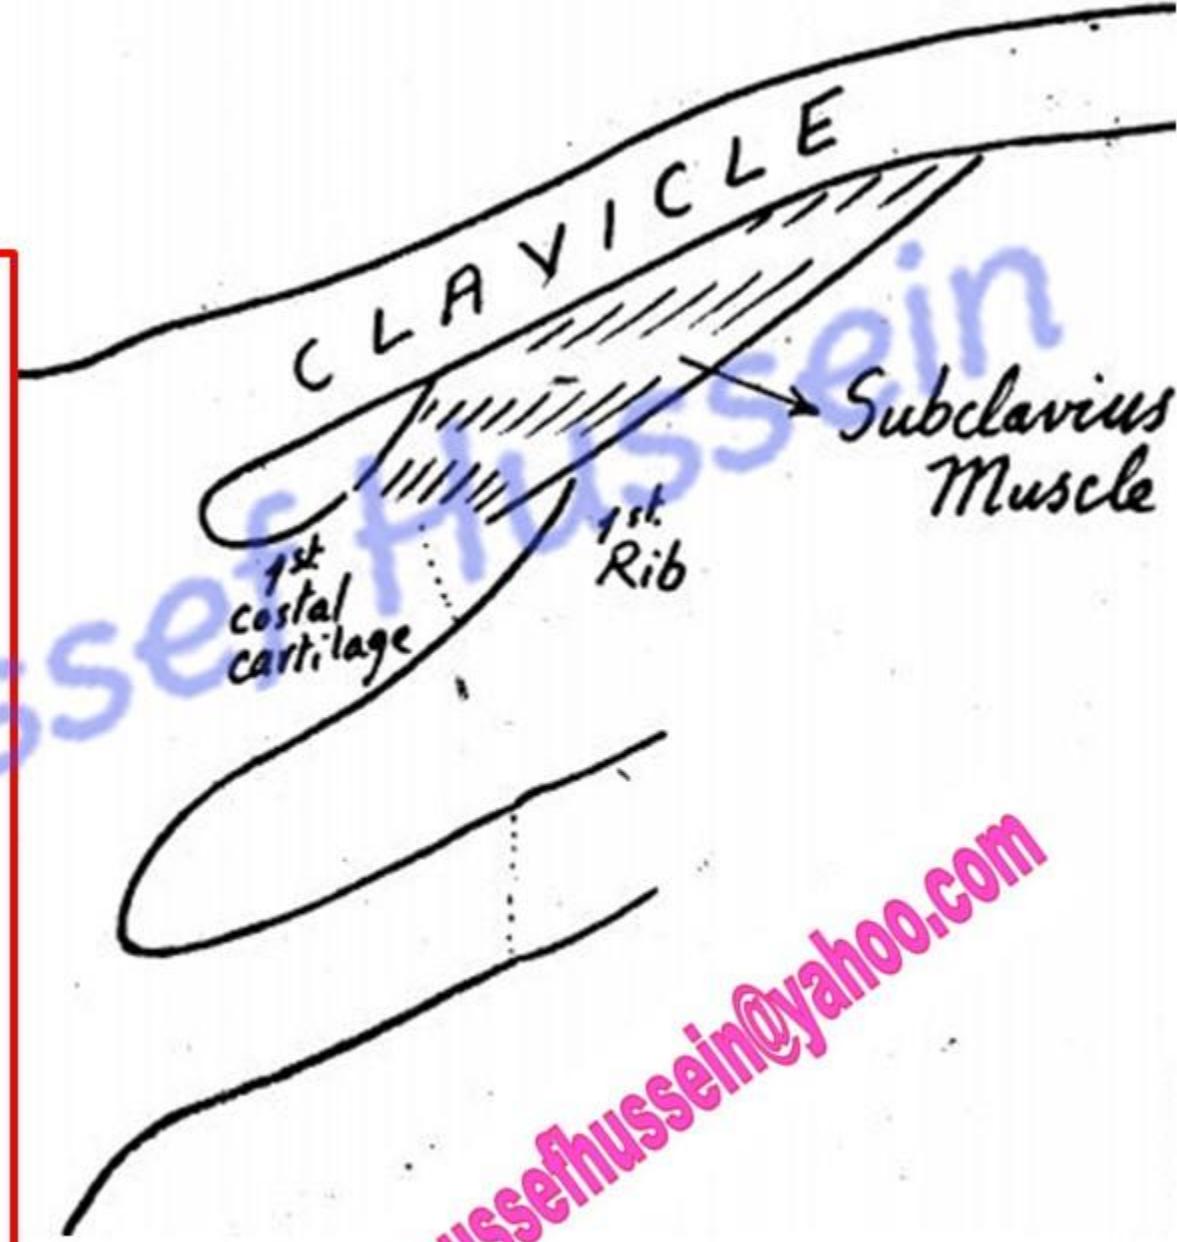

- 2) Depression the shoulder.

- 3) Elevates the ribs during deep inspiration.

Subclavius

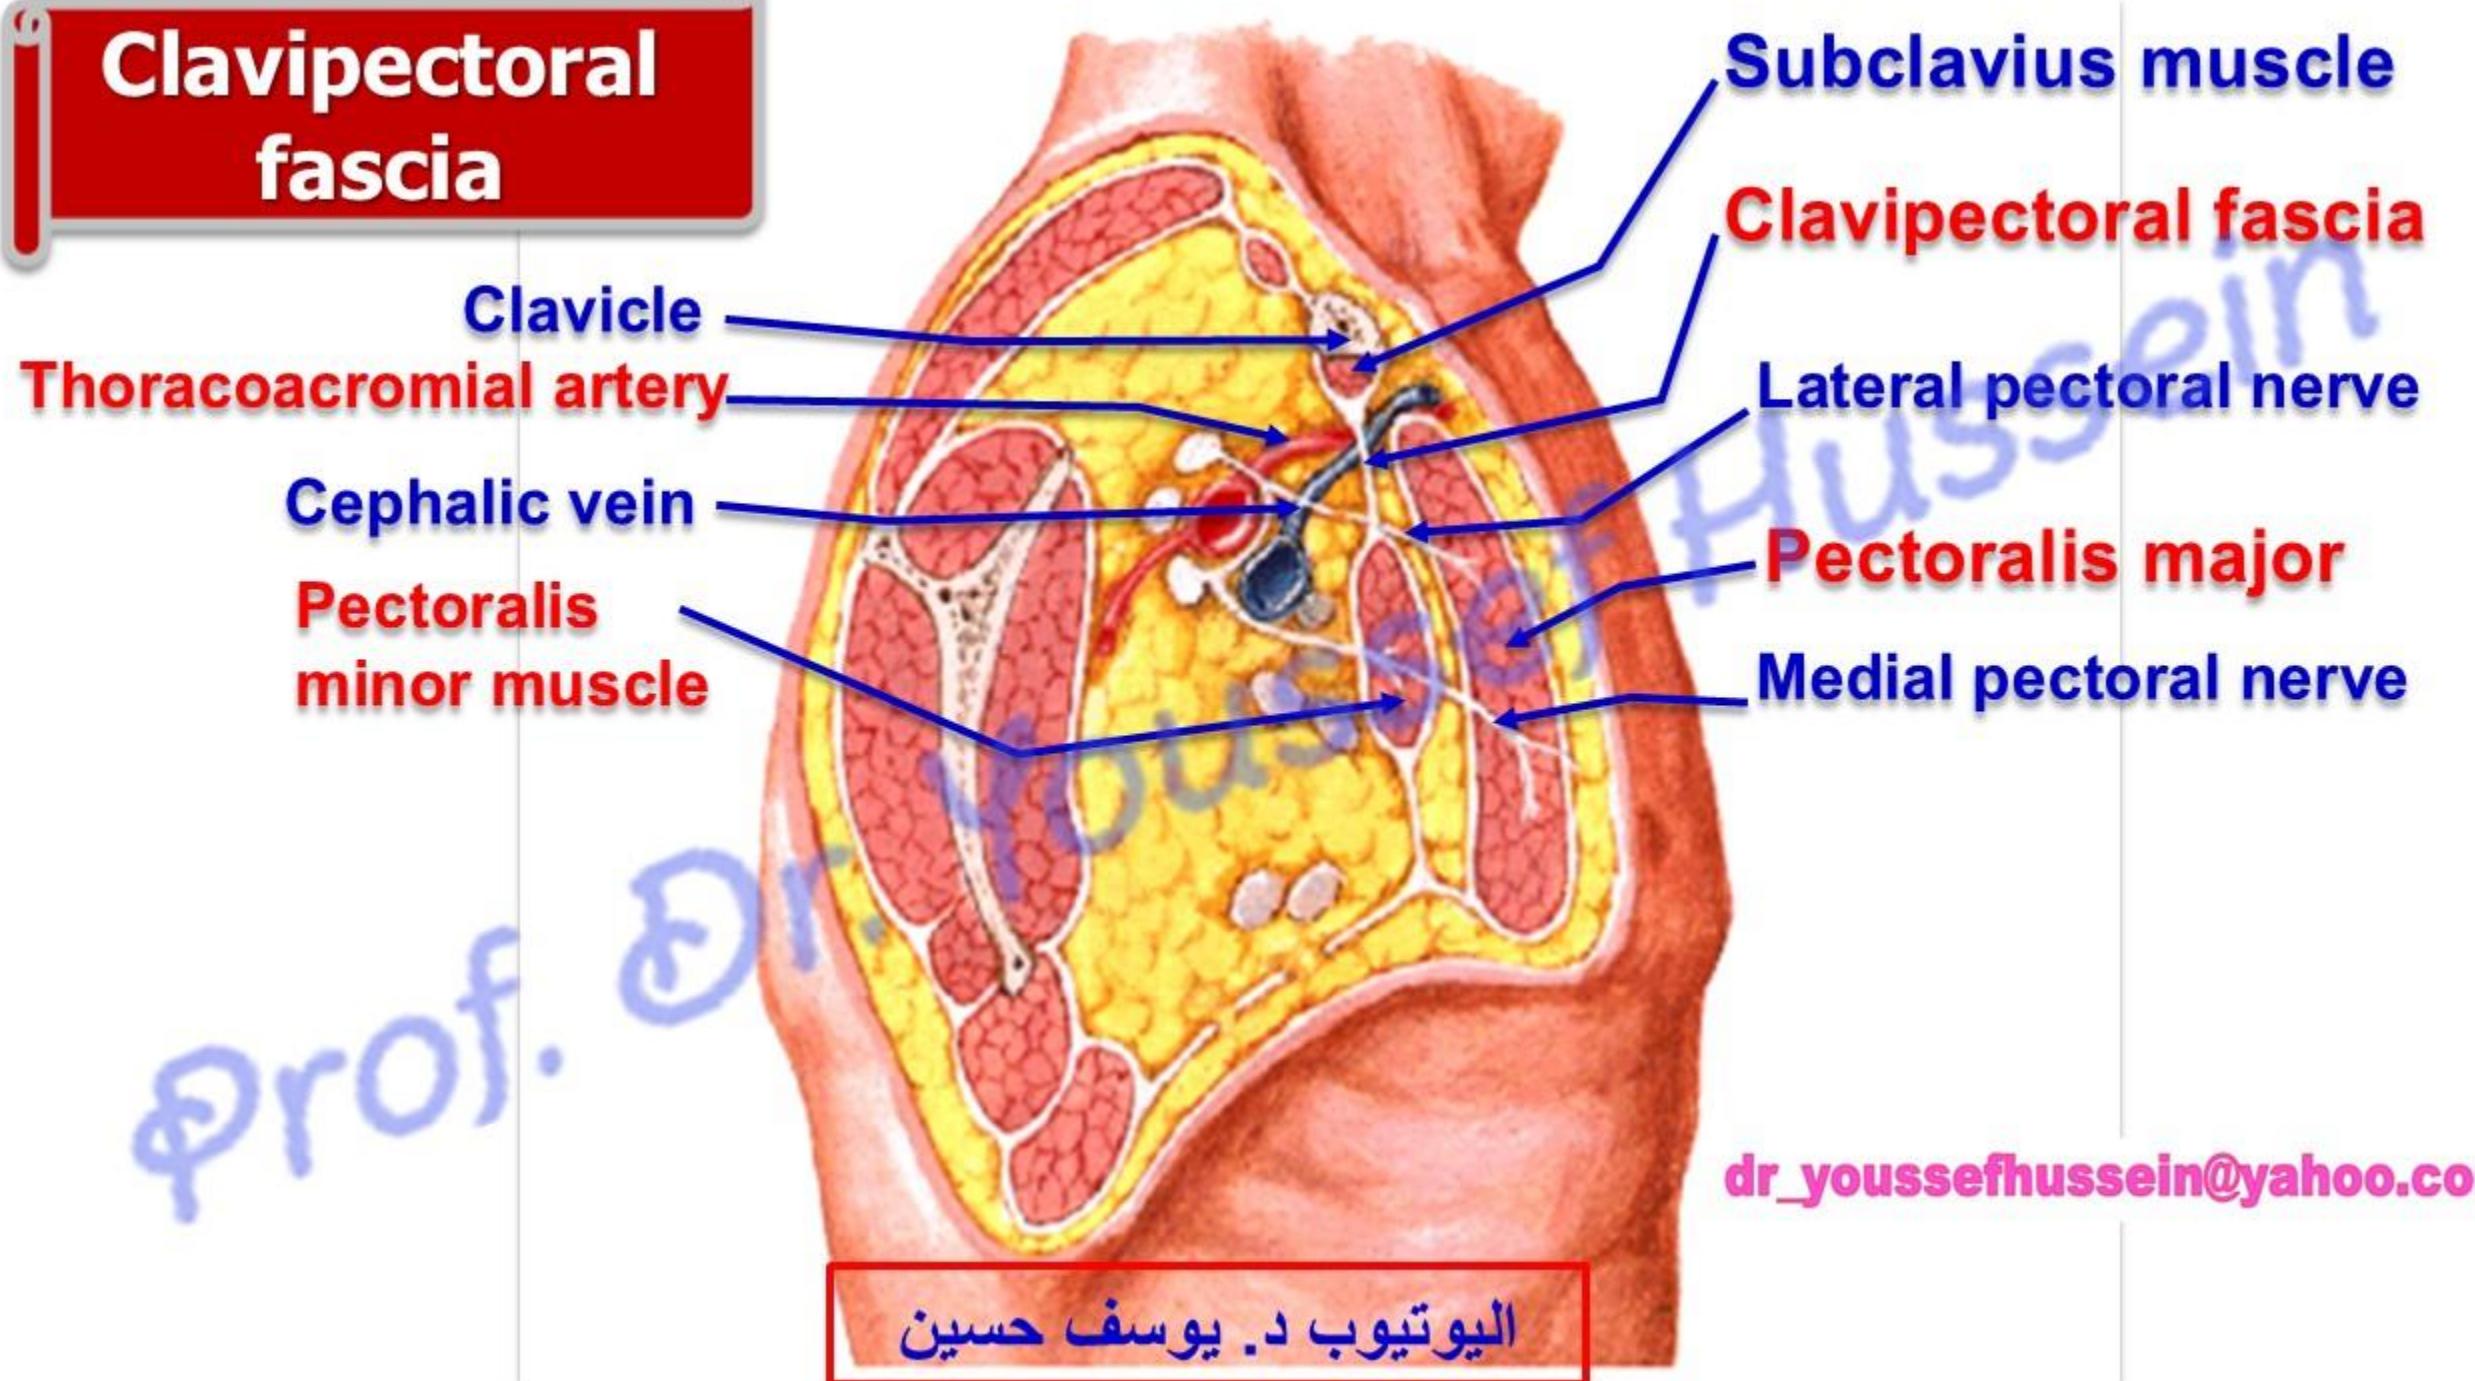

- * **Origin:** from the upper surface of first rib and first costal cartilage.
- * **Insertion:** into subclavian groove on the lower surface of the clavicle.
- * **Nerve supply:** Nerve to subclavius from upper trunk of brachial plexus (C 5 & 6).
- * **Action:** Fixation of the clavicle during movements of the shoulder girdle.

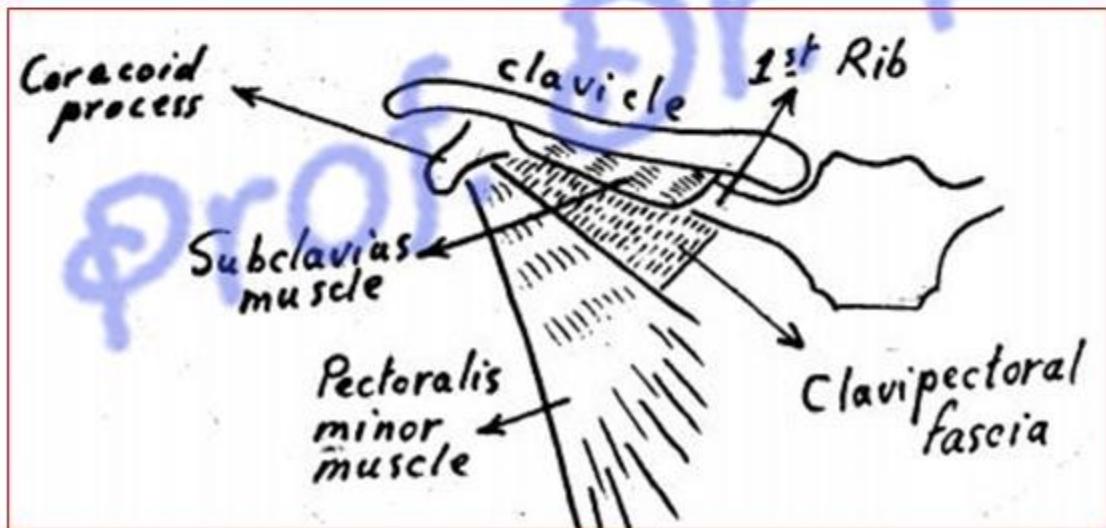

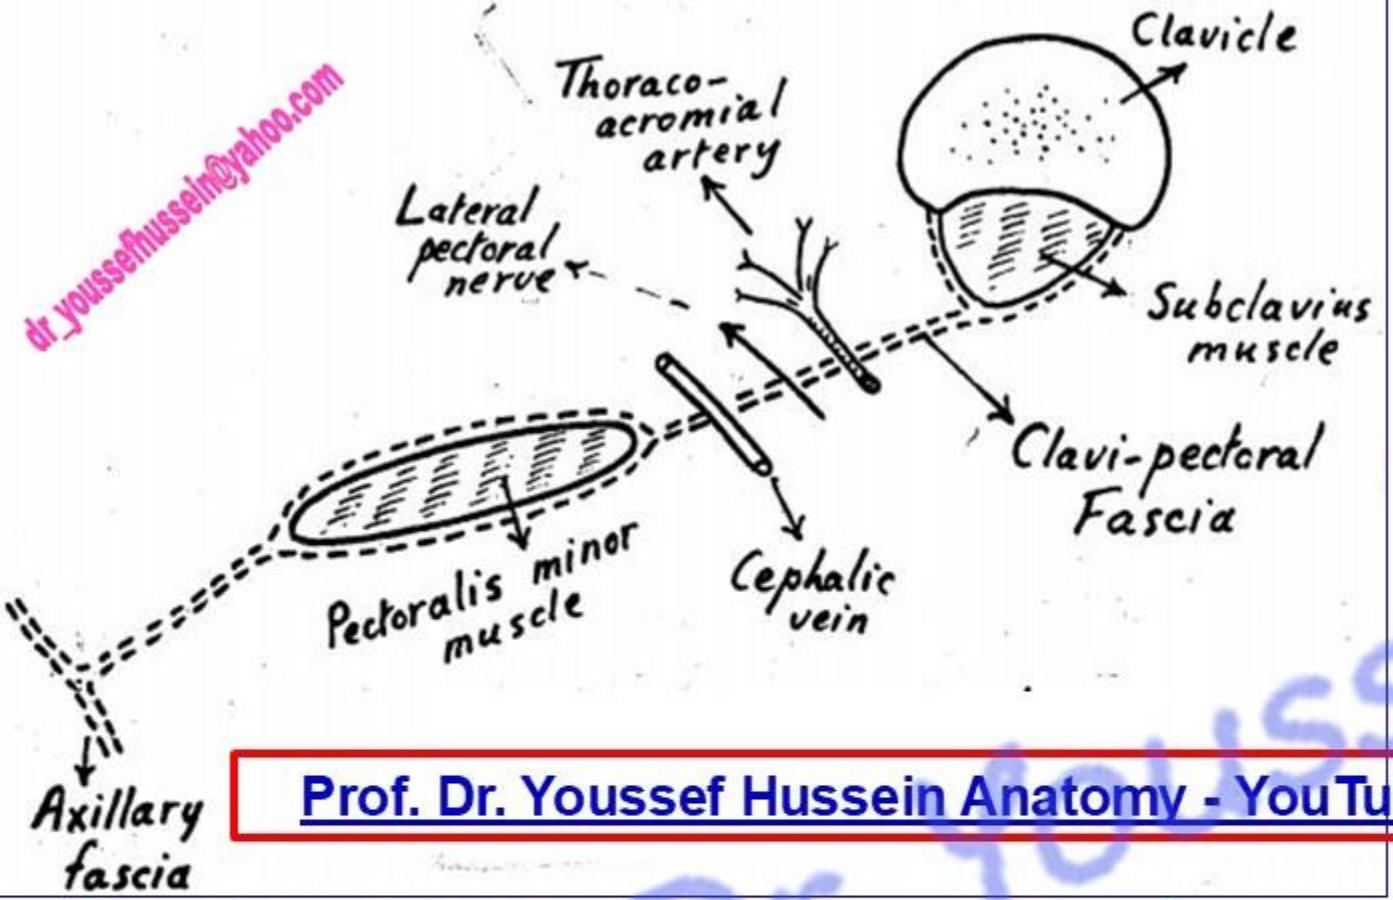

Clavipectoral fascia

اليوتيوب د. يوسف حسين

Clavipectoral fascia

- **Clavipectoral Fascia**

* **Attachments:**

- 1- **Superiorly**, it splits into two laminae which enclose subclavius and attached to the margins of subclavian groove.
 - 2- **Inferiorly**, it splits to enclose pectoralis minor, then fuse together to form **suspensory ligament of the axilla**. It attaches to the axillary fascia.
 - 3- **Medially**, the first rib.
 - 4- **Laterally**, the coracoid process.
- **The structures pierced the fascia**
 - a) Cephalic Vein.
 - b) Thoraco-acromial Artery.
 - c) Lateral pectoral Nerve.
 - d) Lymphatics vessels.

Serratus anterior

اليوتيوب د. يوسف حسين

- **Serratus Anterior Muscle**

* **Origin:** by fleshly digitations from the **upper** eight ribs.

- The first digitation takes origin from the 1st and 2nd ribs.

* **Insertion:** anterior surface of the medial border of the scapula.

a) **The first digitation:** anterior surface of the superior angle.

b) **The 2nd and 3rd digitations:** anterior surface of medial border.

c) **The lower five digitations:** anterior surface of inferior angle.

* **Nerve supply:** long thoracic nerve (**nerve of Bill C5, 6, &7**) passes superficial to the muscle.

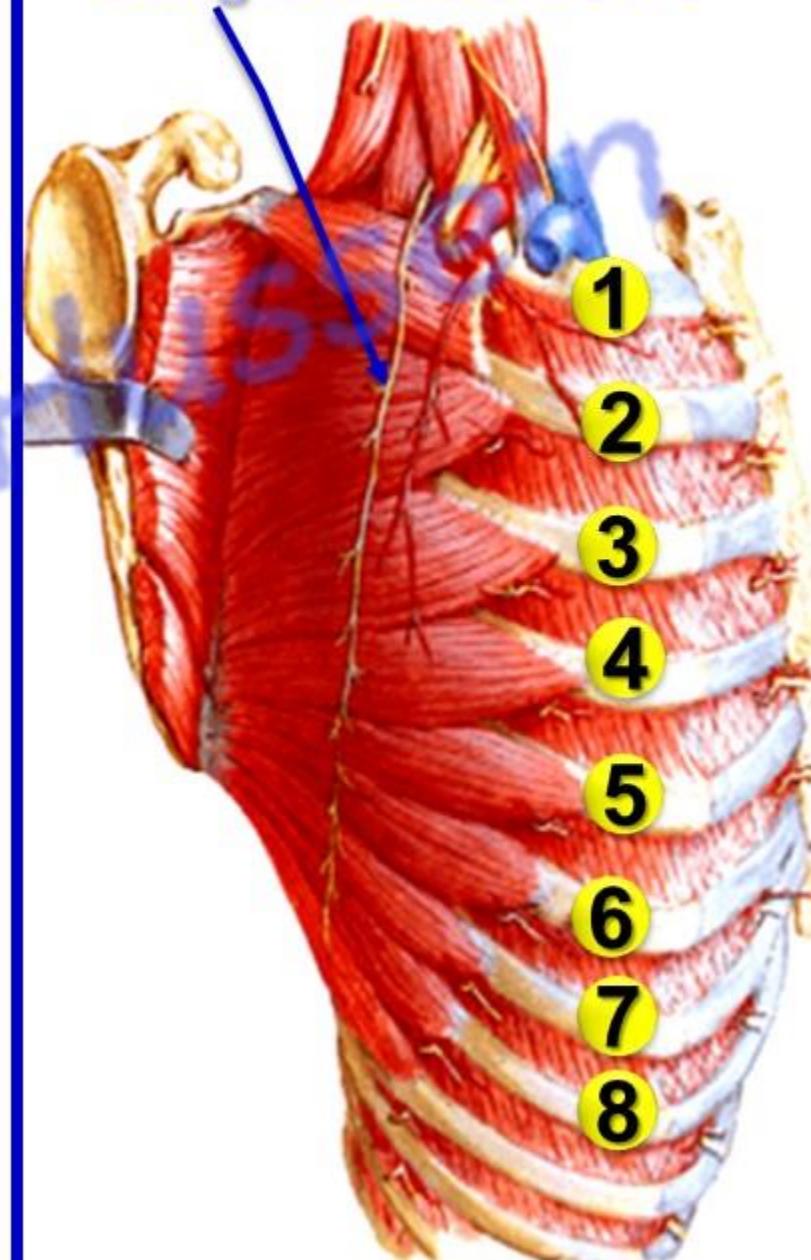

* **Actions:** [Prof. Dr. Youssef Hussein Anatomy - YouTube](#)

1- Protraction of the scapula (pulls the scapula forward with pectoralis minor).

2- Lower 5 digitations, **Abduction of the arm above 90 degree**, acting with the trapezius muscle.

3- Fixation of the scapula during movement of the upper limb.

Long thoracic nerve

**** Injury of the long thoracic nerve**

- It descends in the midaxillary line **on the superficial surface** of the muscle.
- **Winging of the scapula**" due to paralysis of the muscle
- A protrusion of the medial border of the scapula away from the posterior chest wall.
- **Test of the muscle**; ask the patient to push the wall with the outstretched hand. If the muscle is affected the winging is increased.
