## \* نوع نی عن نظریت

fibrous joints

(tends to be immovable)

- 1- fibrous tissue
  - 2- no joint cavity (جهاز مفتوح)

(وجه نویسن) 

suture → in skull      syndesmosis

2-Lympmanostapedial syndesmoses

synovial joints

(Tend to be freely movable) (permit little to no movement)

- 1-between two separate skeletal elements
  - 2-permit certain degrees of movement according to the shape or type of movement

## cartilaginous joints

1- cartilage (cartilagi)

2- no joint cavity

- Are characterized by four structural features:
  - ✓ joint cavity or space,
  - ✓ articular (hyaline) cartilage,
  - ✓ synovial membrane, which produces synovial fluid,
  - ✓ and articular capsule.
