1. Which of the following medications is known for not crossing the placental barrier?

- A) Aspirin
- B) Heparin
- C) Penicillin
- D) Insulin

Answer: B

2. The following factors will decrease rate of drug absorption form GIT except?

- a. Enhanced intestinal motility by osmotic laxative
- b. Biliary obstruction and chronic pancreatitis
- c. Delayed gastric emptying
- d. Formation of food-drug complexes
- e. small particle size Of drug

Answer: E

3. The wrong statement about simple lipid diffusion?

- a. doesn't require energy
- b. doesn't require carrier
- c. can transport water soluble molecules

answer: C

4. One of the following is not related to

PHARMACOKYNITICS :

- a) Absorbtion
- b) Distribution
- c) Uses
- d) Metabolism
- e) Excretion

Answer: C

5. Which of the following is correct about placental barrier?

- A. All lipid soluble drugs cross placenta
- B. Drugs affect the embryo by the same mechanism
- C. Some drugs that cross placenta are teratogenic
- D. Placental barrier is perfect impermeable against small lipid drugs

Answer: C

.....

6. Which of the following decrease clearance in the body :

- a) metabolism
- b) Absorption
- c) plasma protein binding

Answer: c

7. All of the following increase duration of action

of drugs except :

- a) Delay absorption
- b) Decrease metabolism
- c) Increase Excretion

d) Using enzyme inhibitors

Answer: C
