1. All of the following is worker exposed to animal product except:

- a) Meat packer
- b) Butchers
- c) Cargo handler
- d) Farmer
- e) Pest control worker

ans: e

2. A community in town X are exposed to nuclear leakage from the nuclear plant nearby, what is this type of exposure?

- a) Stochastic
- b) Non-stochastic
- c) Time

Ans: b

3. Definition of threshold :

4. Definition of latency :

5. Definition of synergism :

6. All the following are the importance of keeping health record for each employee EXCEPT?

- a) for detecting morbidity and/or mortality rates of a health problem
- b) for the planning of industrial health program
- c) for factory's budget estimation for industrial health program evaluation
- d) for detection of the trends of health and/or disease

ans : c

7. Following are the cognitive reactions to stress at the workplace, EXCEPT?

- a) Less problem solving
- b) Diminished motivation
- c) Reduced learning ability
- d) Less problem solving
- e) Decreased attention

Ans : b

8. The duties of the Occupational nurse are all the following, EXCEPT?
- a) Assisting the physician in providing medical services,
 - b) Assisting in supervising the work's environment
 - c) Deciding the rehabilitation of the diseased workers
 - d) Assisting the physician, in the health education of the workers
 - e) keeping the medical records

ans : c

9. Type of prevention of periodic examination :

Ans : secondary prevention

10. For protecting workers against the biological hazard, the first line of defense is the?
- a) Administrative Controls
 - b) Engineering Controls
 - c) Personal Protective Equipment
 - d) Adequate supervision
 - e) Personal hygiene

Ans: b

11. The pre-placement medical exam has the following objective, EXCEPT
- a) To make workers performing their job without hazards.
 - b) To obtain a baseline of the health status of the workers
 - c) To be used in case of compensation
 - d) To placing the workers according to their ability
 - e) To decrease the number of workers

Ans : e

12. All tissues are the most radio sensitive except :

- a) reproductive
- b) Hematopoietic
- c) Pancreas

- d) Skin
- e) Lens of the eye

Ans : c

13. One is an ionization radiation :

Ans : Radon in indoor airs

14. Maximum radiation exposure limit in a single year is:

ans : 50 msv

15. All of the following is actions focus on change in the organization culture except

- a) Dealing with aggressive customers
- b) Redistributing work among colleagues
- c) Providing clear job descriptions

Ans: a

16. All are penetrating radiation except:

- a) Neutron
- b) Proton
- c) Beta particles
- d) Gamma rays
- e) Uranium

Ans : e

17. All of the following is emotional reactions except:

ans : Decreased attention

18. All of the following is stress related to work content except

ans : Interpersonal relationships

19. All of the following is effect of stress on organization except :

Ans : Increase work performance

20. All of the following is worker exposed to animal product except :

- a) Meat packer
- b) Butchers
- c) Cargo handler
- d) Farmer
- e) Pest control worker

Ans : e

21. Sensorineural hearing loss is:

Ans : Cochlear hair cell disruption

22. All of the following is non auditory effects of noise except :

- a) increase heart rate
- b) Increase respiratory rate
- c) Decrease of sleep quality
- d) Increase in gastric mortality
- e) Decrease in work performance

Ans : d

23. Disability is :

Ans : Lack of ability to perform an activity in the optimum manner

24. The target group in occupation medicine is :

Ans : diseased workers

25. All of the above are used for radiation treatment except:

Ans : Using radiation vaccine

26. Nitrogen necrosis symptoms, except :

Ans : Aggressiveness

27. Risk is function for all of the above except:

Ans : Effect

28. All the following are criteria for identification of occupational diseases. EXCEPT

- The causal relationship is existing between a specific disease and specific exposure in a workplace
- By removing or reducing a specific hazard from the working environment, elimination or reduction of specific disease development will be noted
- Morbidity of the disease is much higher among the exposed workers, compared to the rest of the population
- The disease temporality should be exist
- With respect to the clinical and pathological presentation the occupational disease is often not matching that of non-occupational disease

Ans : e

29. For protecting workers against the biological hazard, the first line of defence is the :

- Administrative Controls
- Engineering Controls
- Personal Protective Equipment
- Adequate supervision
- Personal hygiene

Ans: b

لا تمك ،، أكمل طريقك ،، إن الله يحب العبد اللّوح
