# Lateral Ventricle

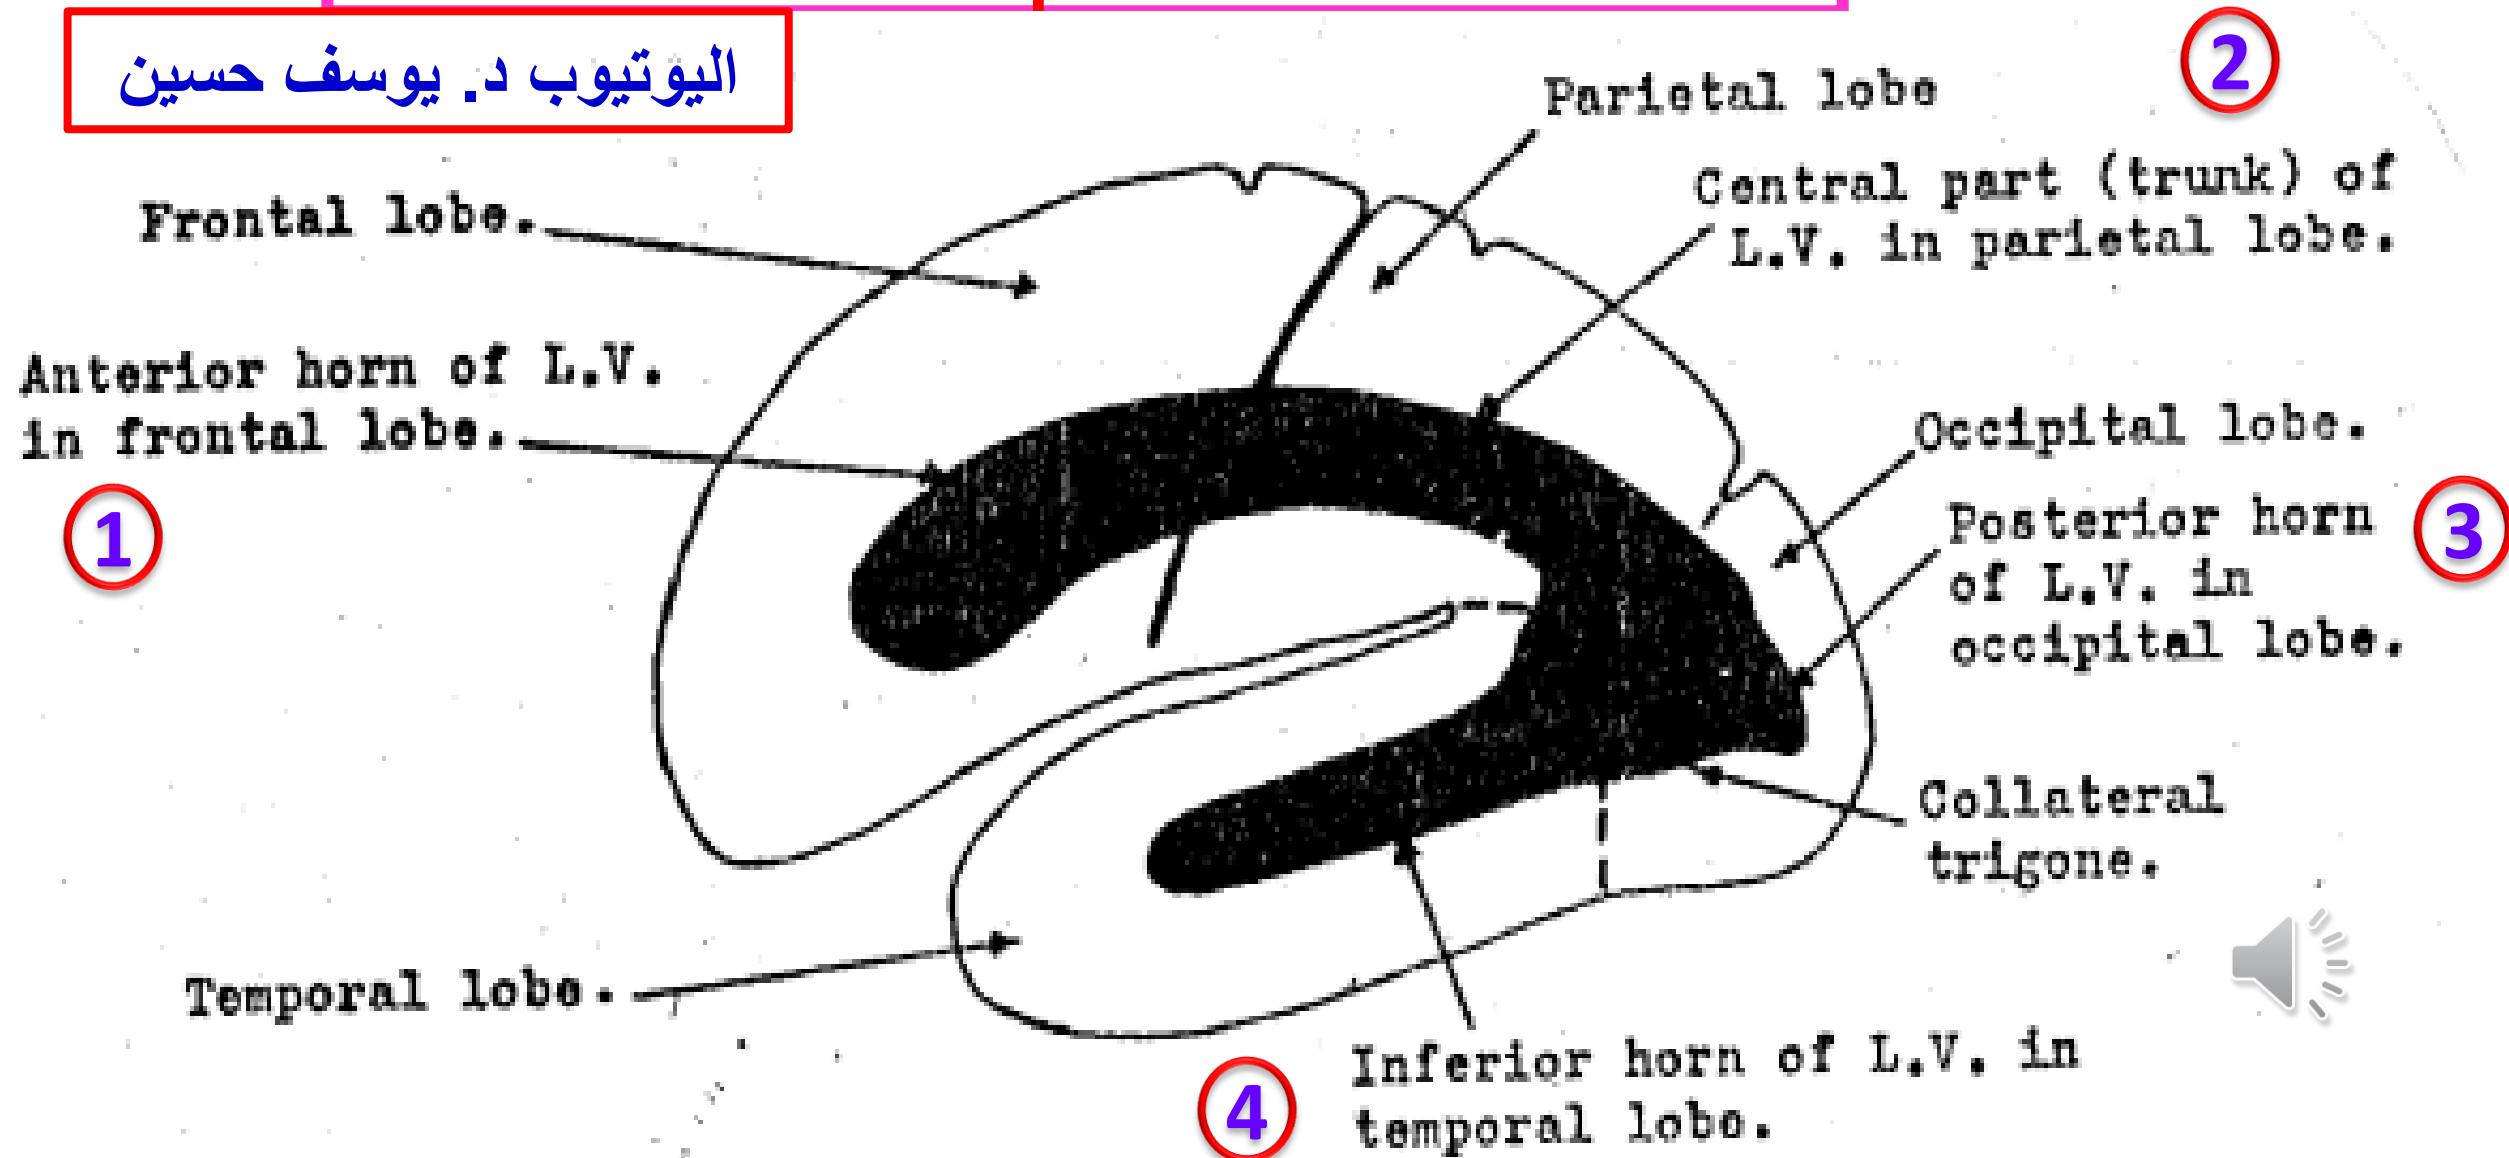

Prof. Dr. Yousef Hussein

اليوتيوب د. يوسف حسين

# Lateral Ventricle in the left cerebral hemisphere L.S

اليوتيوب د. يوسف حسين

- **Lateral ventricle**

**\*\* Site;** It is the cavity of the cerebral hemisphere, one on each side.

**\*\* Parts;**

- It is formed of **4 parts**;

1- Anterior horn; in the frontal lobe.

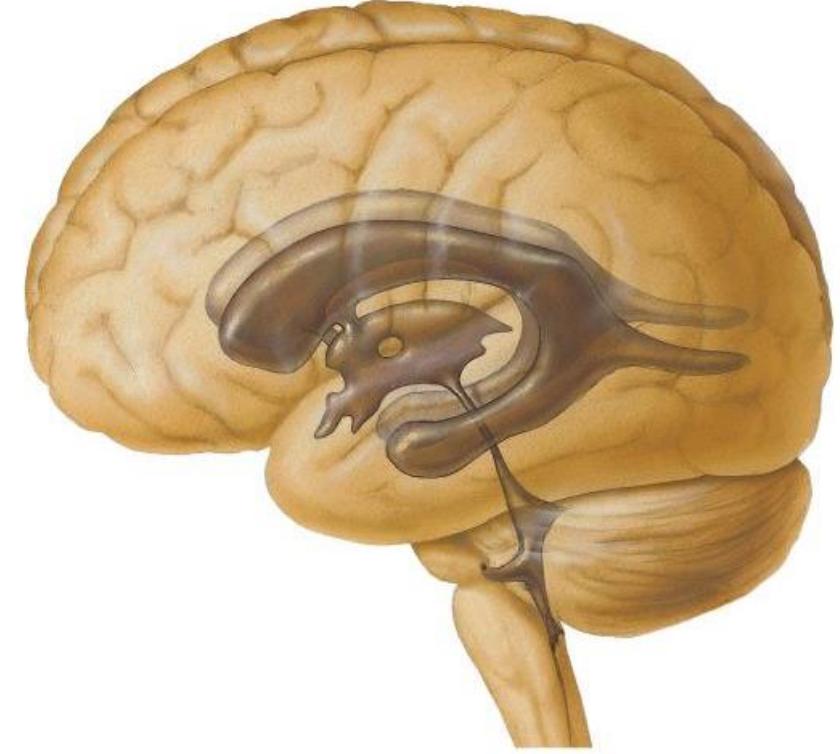

2- Central part; lies in the parietal lobe.

3- Posterior horn; in the occipital lobe.

4- Inferior horn in the temporal lobe.

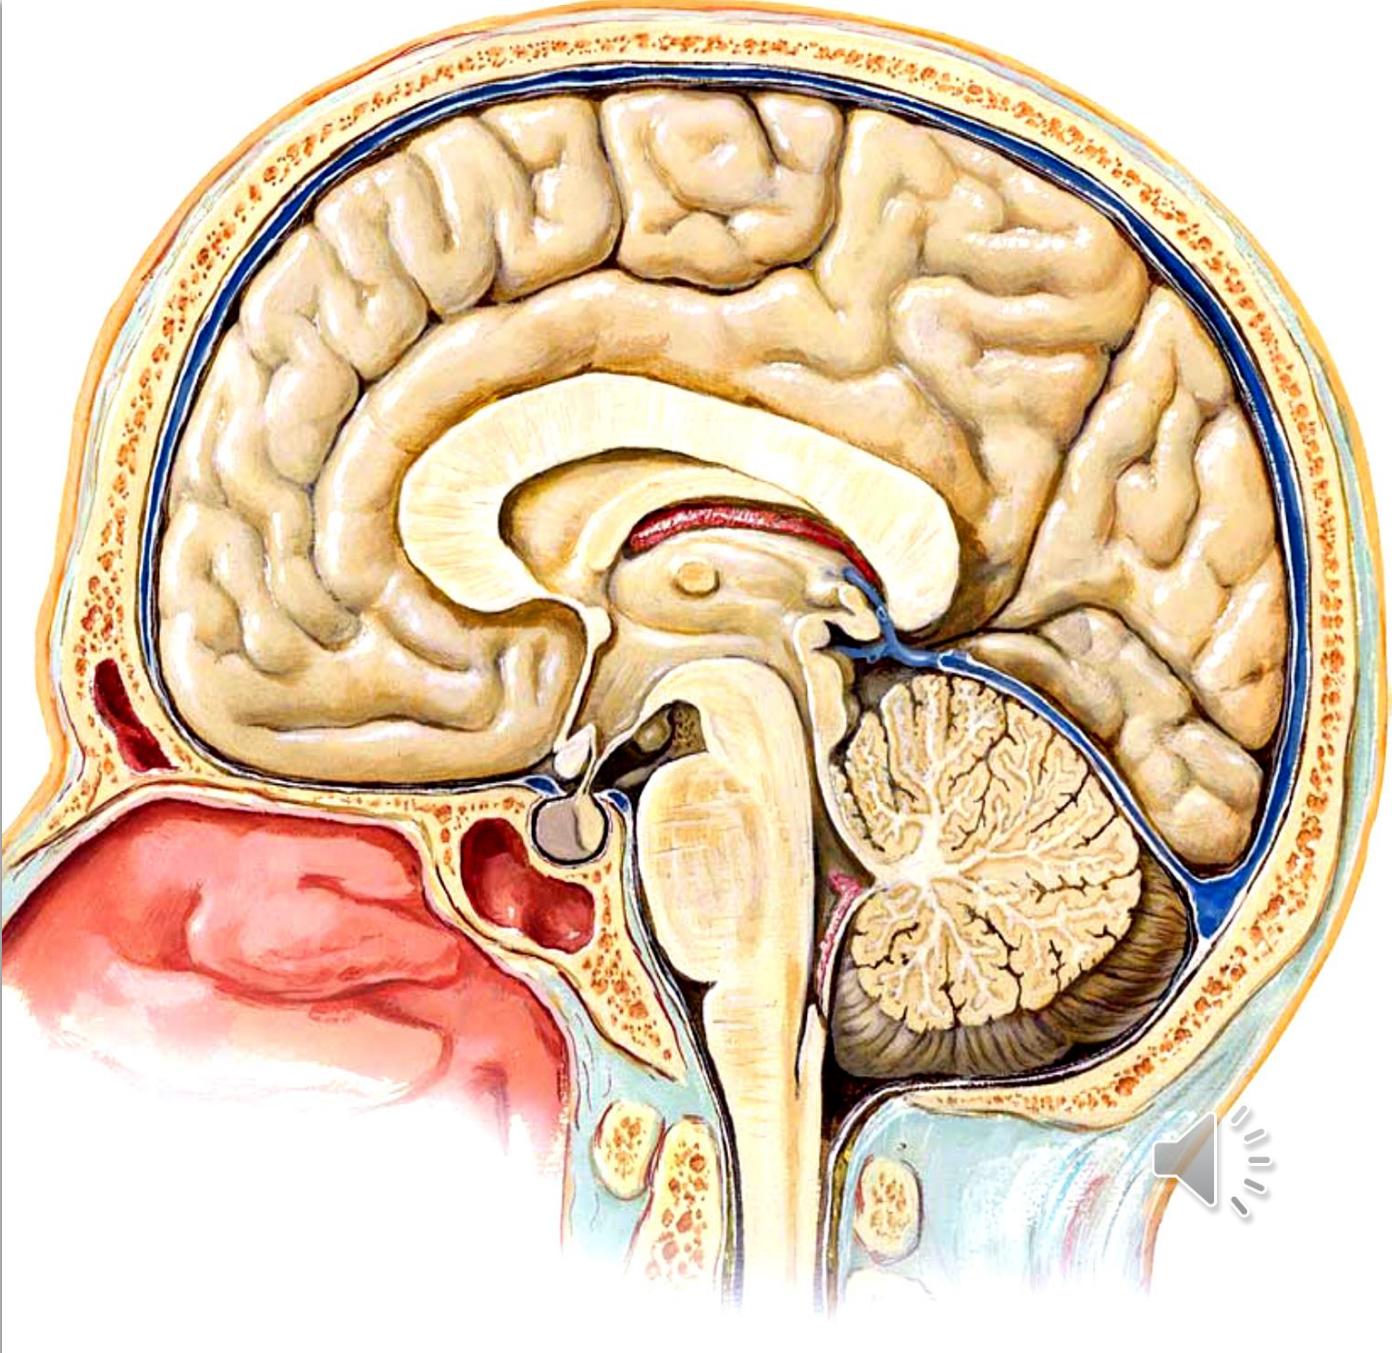

**\*\* Connections;**

-The anterior horn is connected to the 3rd ventricle by  the interventricular foramen (foramen of Monro).

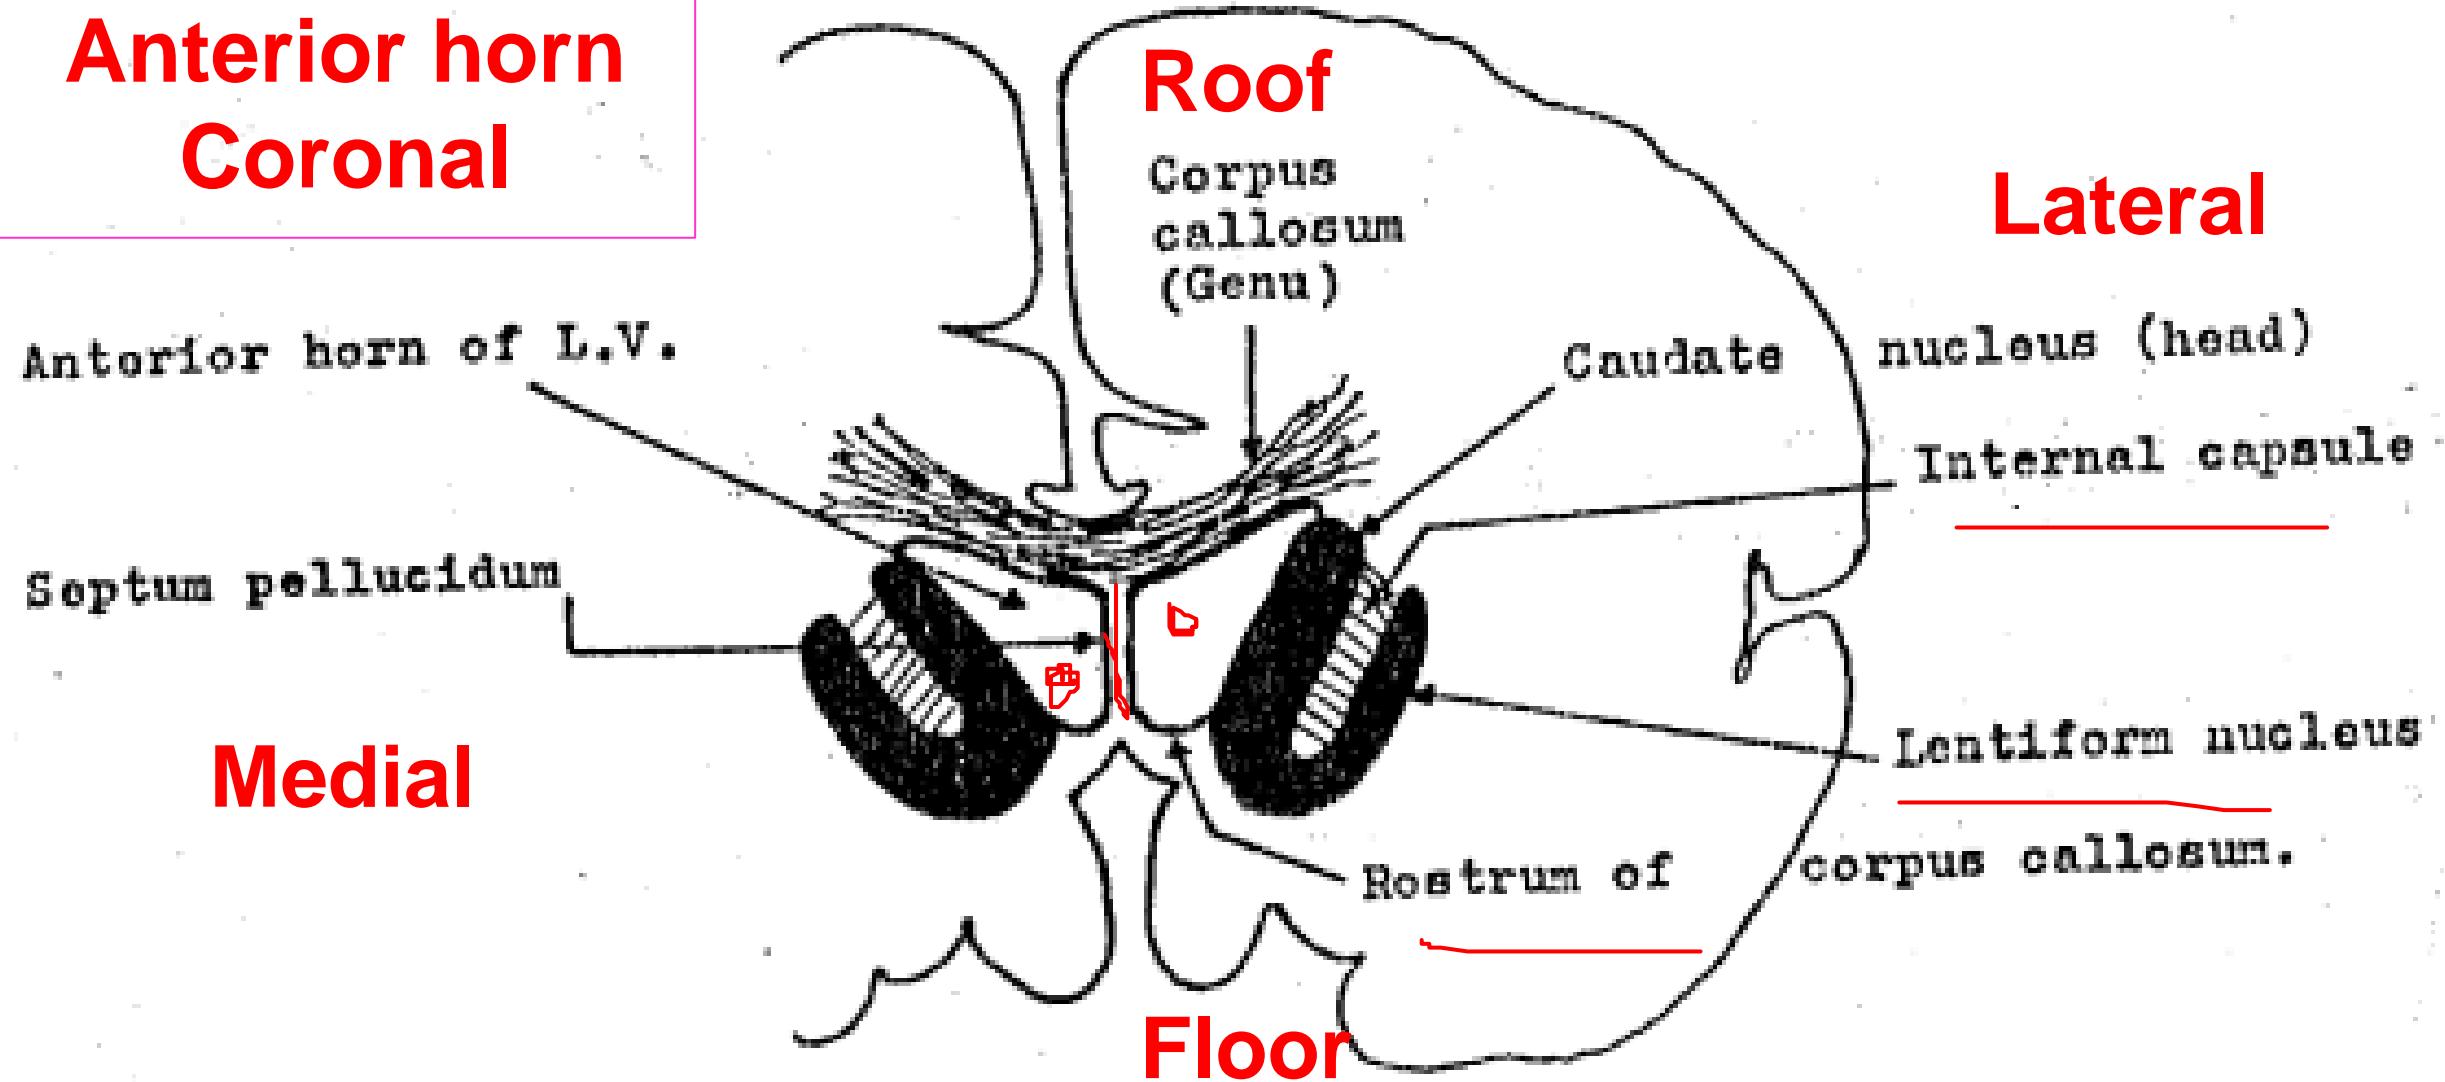

## Anterior horn Sagittal section

- 1- **Anterior and Roof;** genu of corpus callosum.
- 3- **Floor;** rostrum of corpus callosum.
- 4- **Medial wall;** septum pellucidum.
- 5- **Lateral wall:** head of caudate nucleus separated from lentiform by internal capsule.

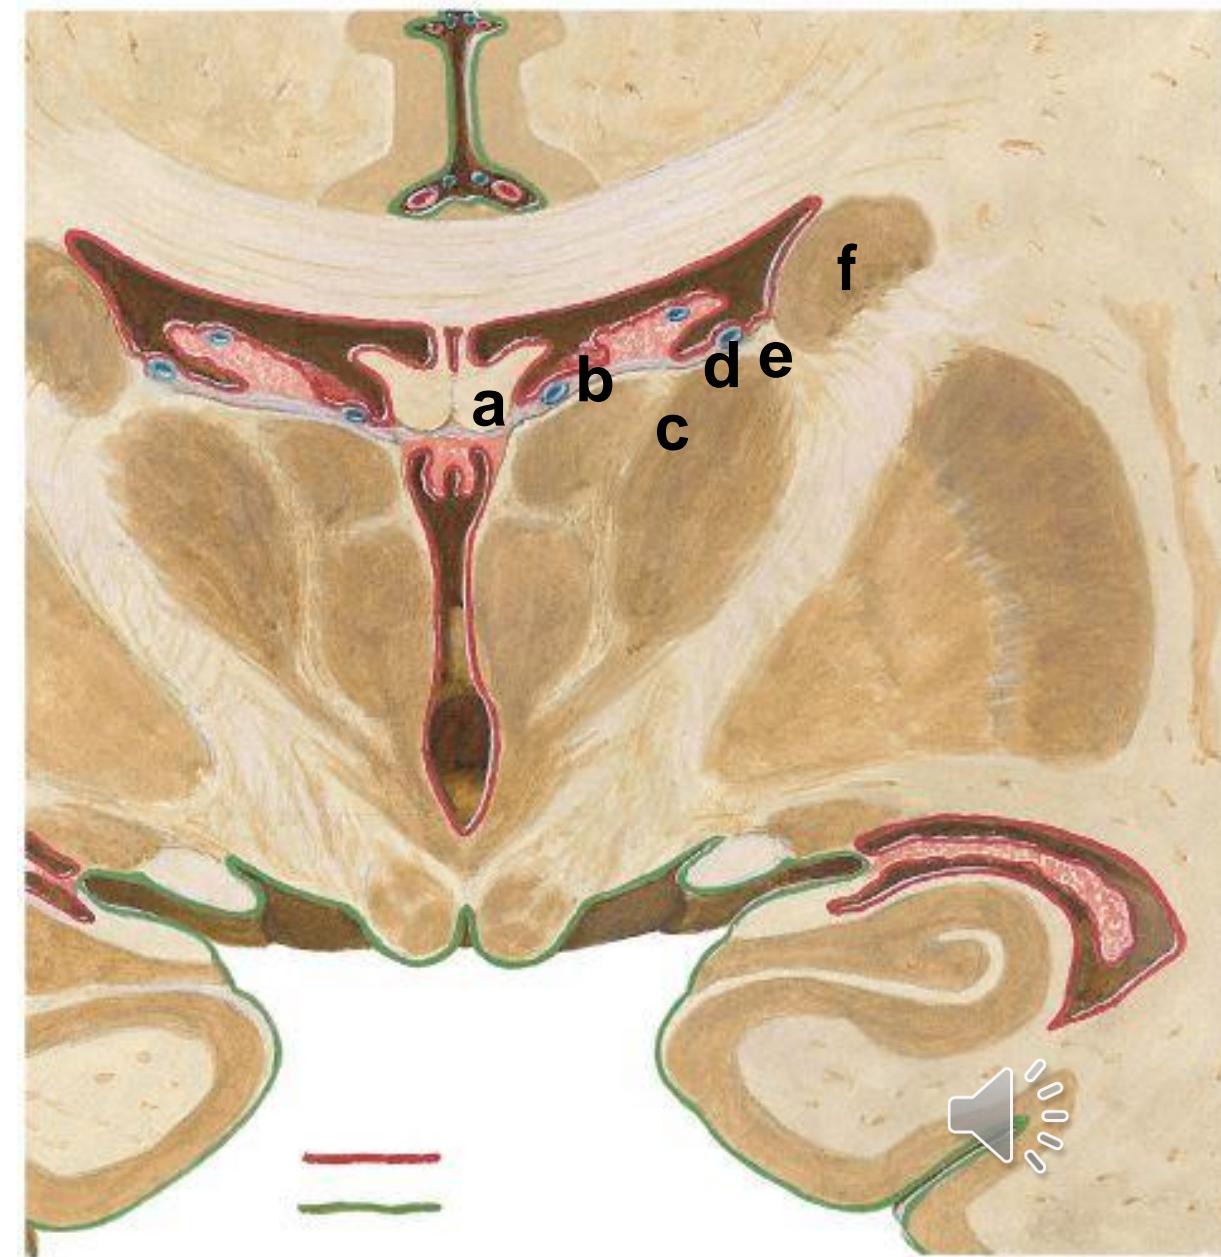

## Anterior horn Coronal

- **Boundaries of the central part of the lateral ventricle (Coronal)**

- 1- **Roof**, body of corpus callosum.
- 2- **Medial wall**; septum pellucidum.
- 3- **Floor**: from medial to lateral;
  - a- Body of fornix.
  - b- Choroid plexus of the lateral ventricle.
  - c- Superior surface of the thalamus.
  - d- Thalamostriate vein.
  - e- Stria terminalis
  - f- Body of caudate nucleus.

## Central part coronal

اليوتيوب د. يوسف حسين

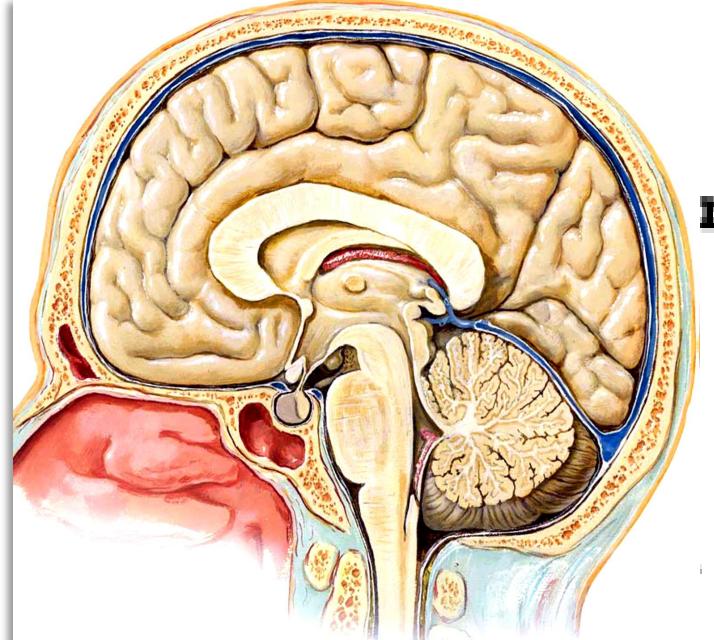

Central part of L.V.

Medial

Septum pellucidum.

Choroid plexus.

Thalamostriate vein.

Roof

Corpus  
callosum (body).

Caudate  
nucleus (body)

Stria

Fornix.

Thalamus.

Lateral

## Inferior Horn coronal

1- **Lateral wall**, tapetum of corpus callosum.

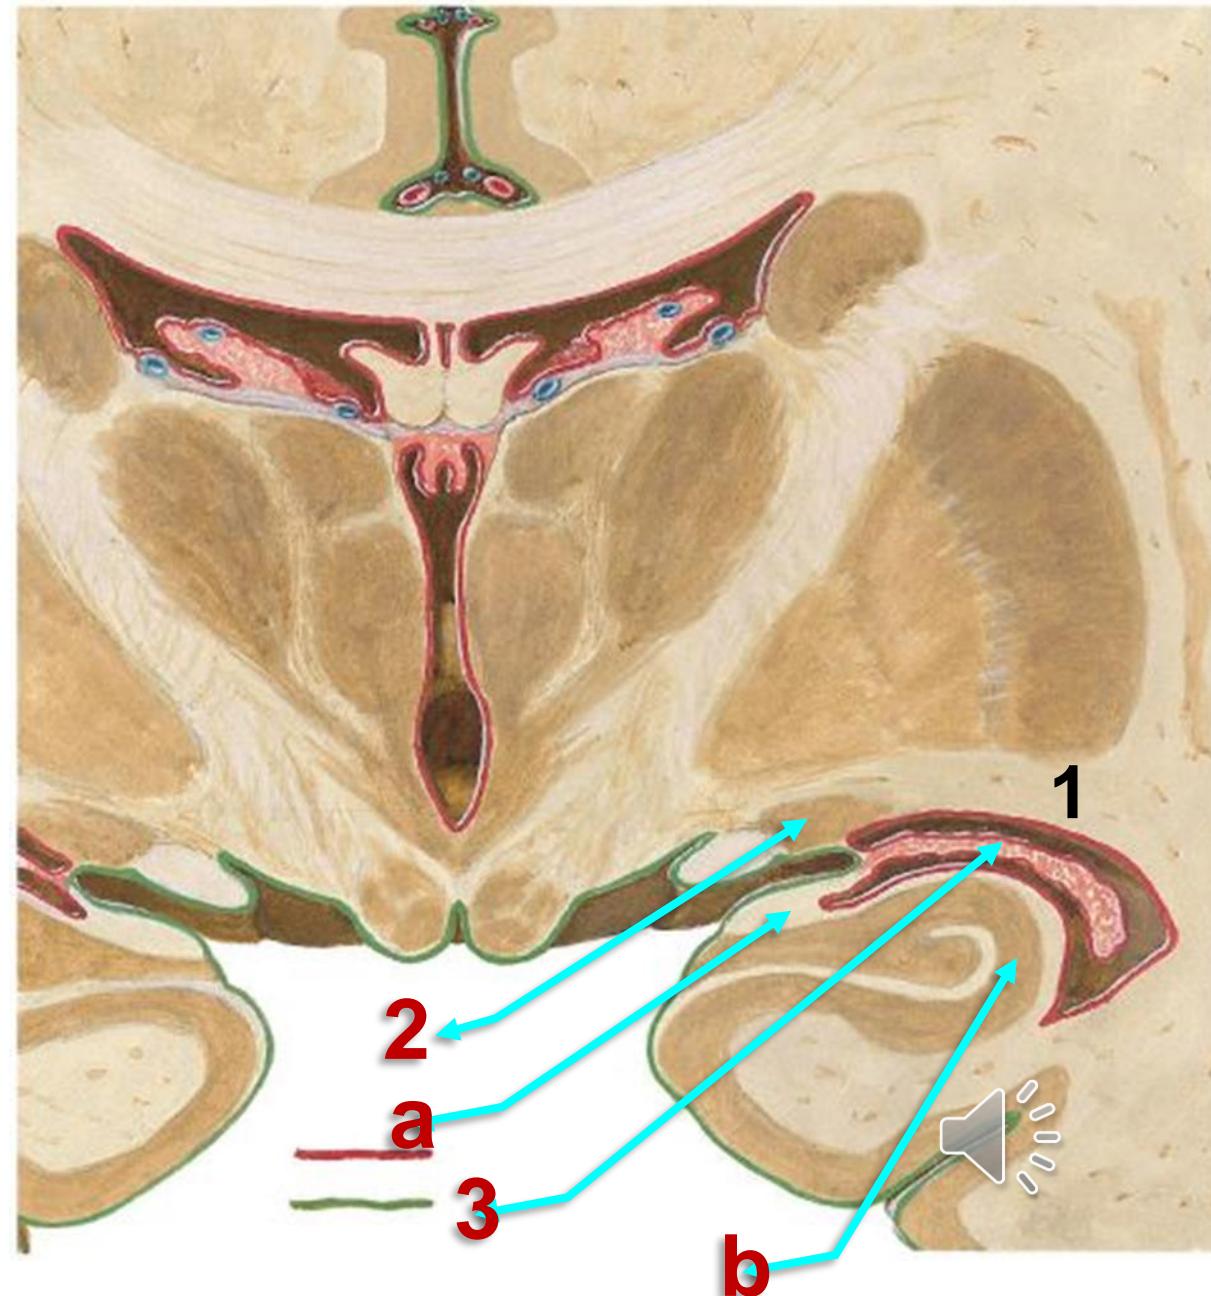

2- **Roof**, Tail of caudate nucleus & Stria terminalis.

3- **Medial wall**: choroid fissure invaginated by choroid plexus.

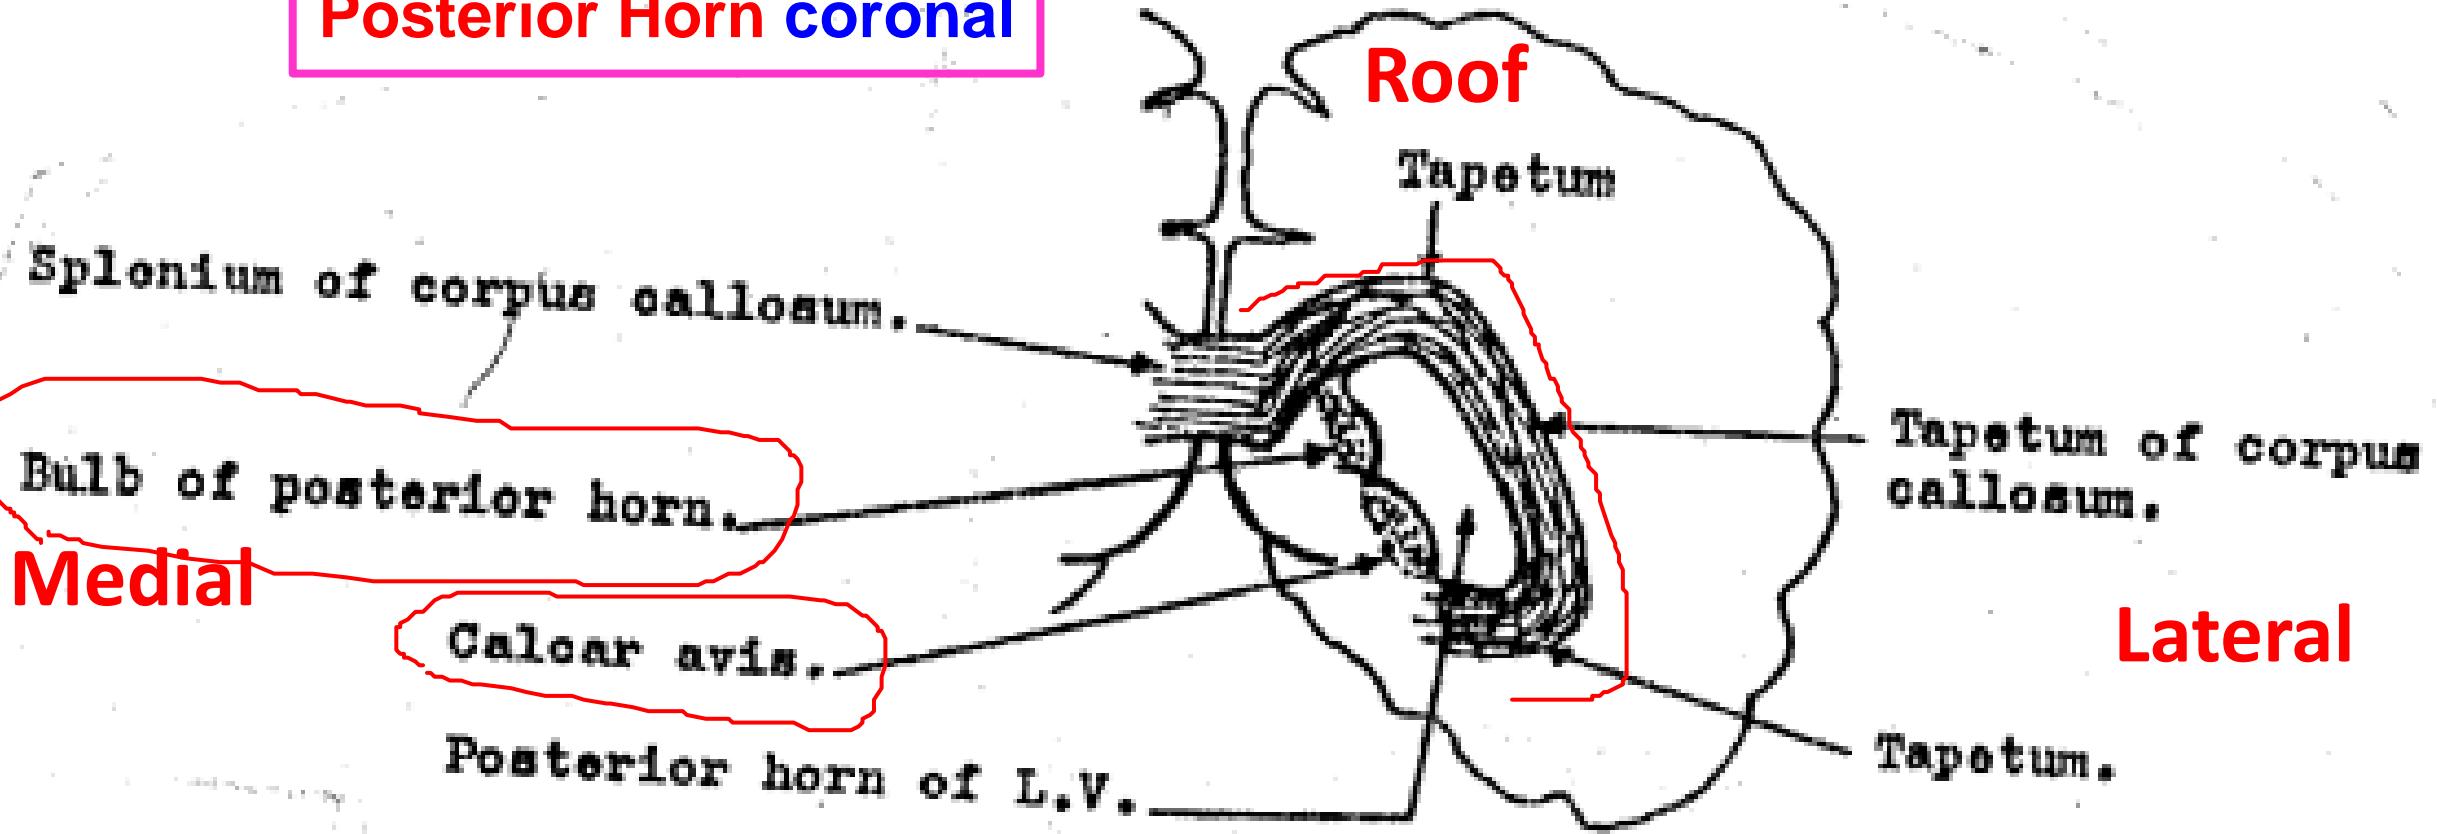

4- **Floor**:

a- Fimbria of the hippocampus.

b- Hippocampus

## Posterior Horn coronal

**1- Roof, lateral wall and floor; tapetum of corpus callosum.**

**2- Medial wall;** shows 2 elevations;

a- Bulb of posterior horn (upper); is formed by forceps major of corpus callosum.

b- Calcar avis (lower); produced by the calcarine sulcus.

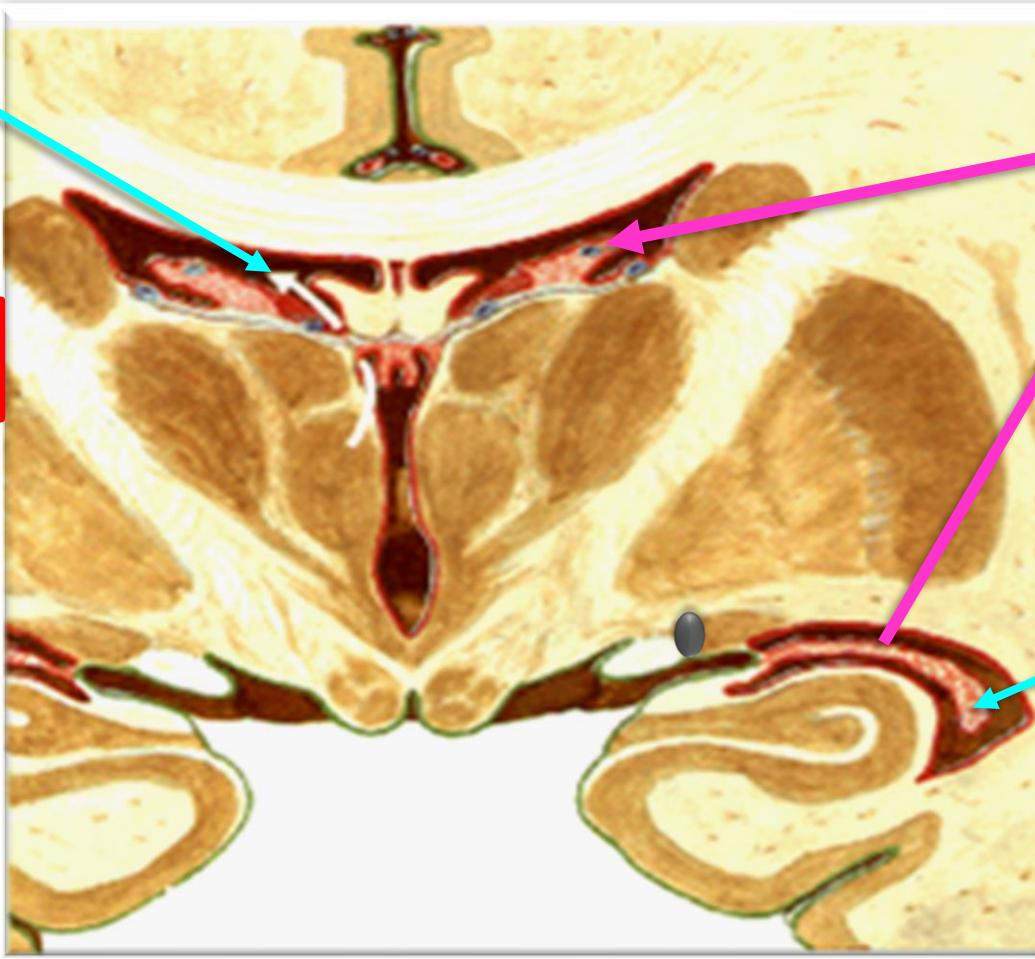

اليوتيوب د. يوسف حسين

The central part  
of the lateral  
ventricle

اليوتيوب د. يوسف حسين

Choroid plexus  
of the lateral  
ventricle

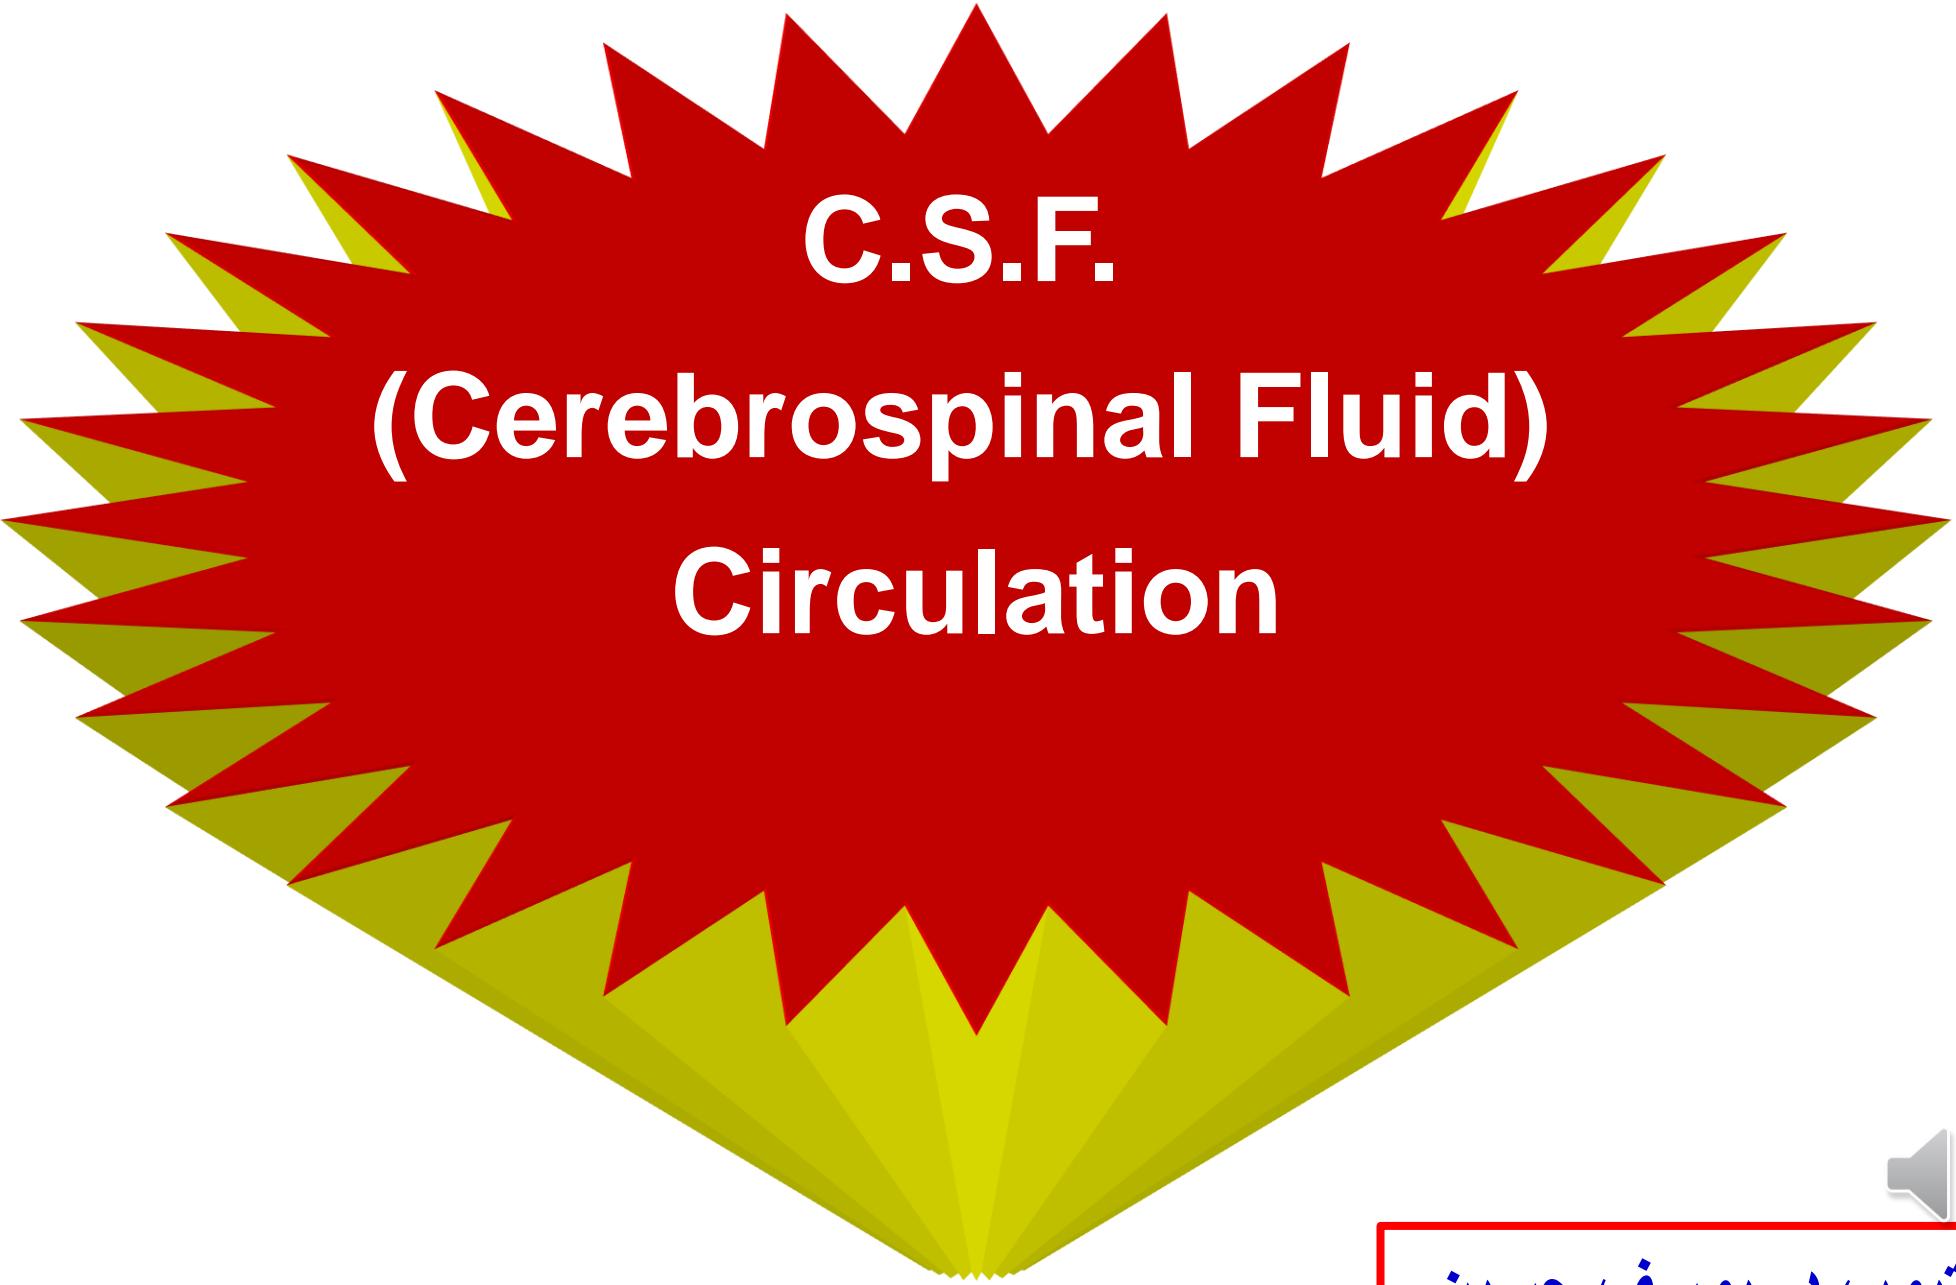

Choroid Plexus of  
the Lateral  
Ventricle

The inferior horn  
of the lateral  
ventricle

- **Tela choroidae**; double-layer of pia matter contains choroid plexuses
- **Choroid plexus** in **central part** is formed by **posterior choroidal branches of posterior cerebral artery**.
- **Choroid plexus** in **inferior horn** is formed by **anterior choroidal branches of internal carotid artery**.

**C.S.F.**  
**(Cerebrospinal Fluid)**  
**Circulation**

اليوتيوب د. يوسف حسين

## • Functions of cerebrospinal fluid

- 1- Protects the brain and spinal cord from the external shocks and trauma.
- 2- Supports the brain and spinal cord.
- 3- Regulation of the intracranial pressure.
- 4- Used for diagnosis of some diseases (**Lumbar puncture**)

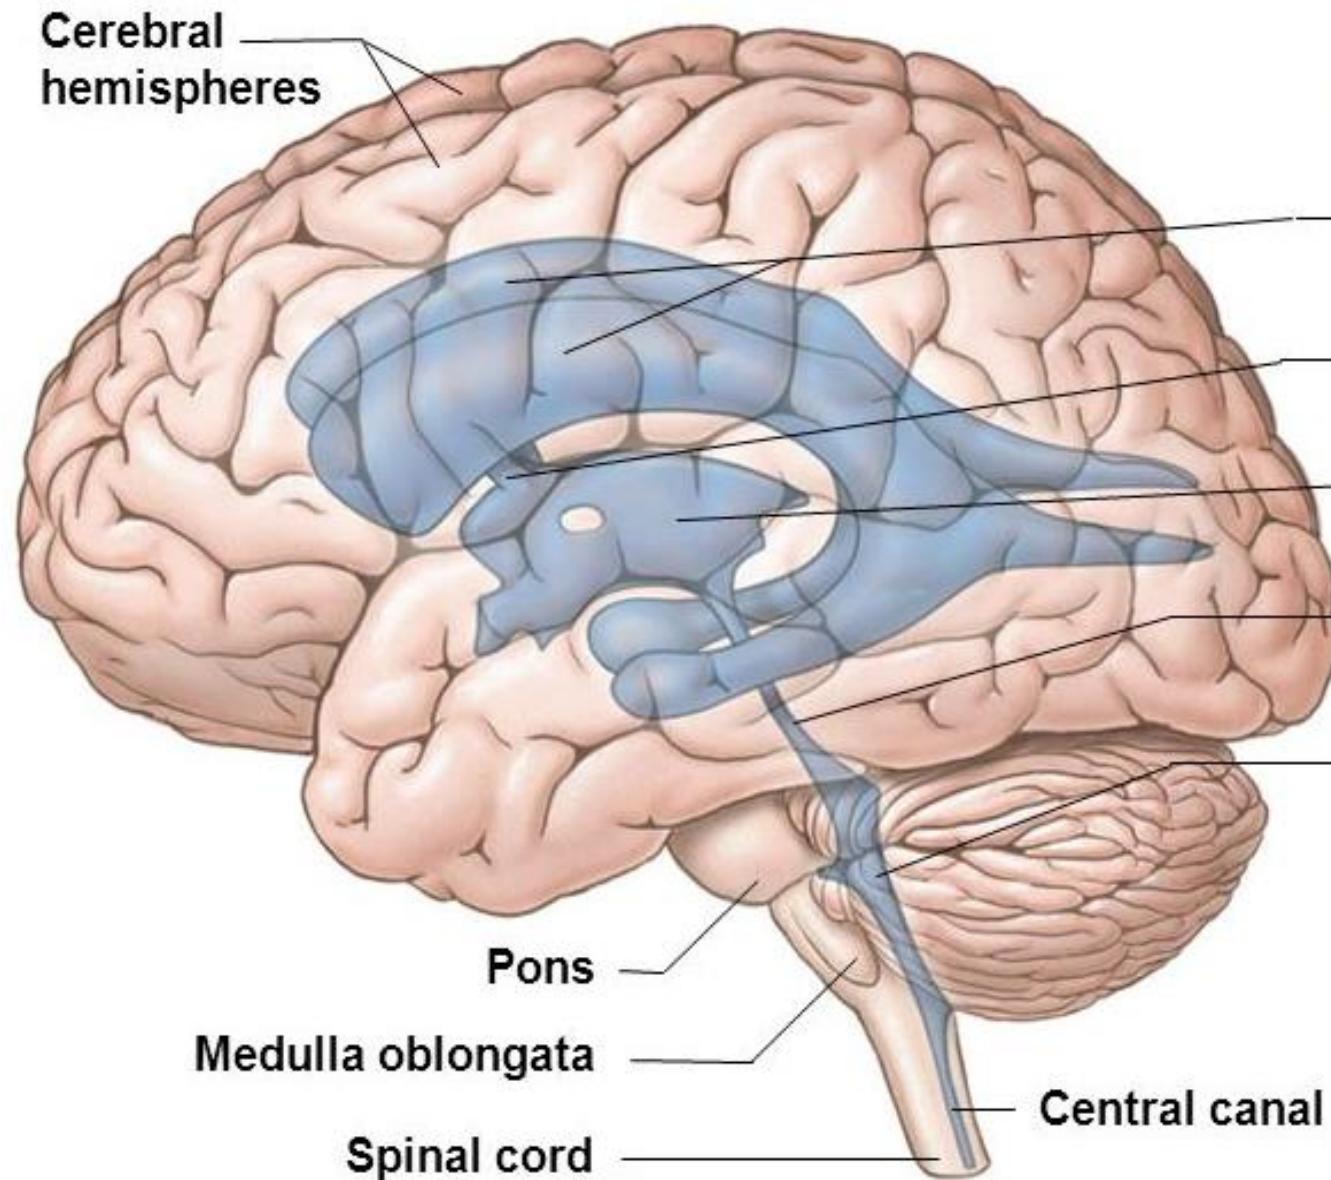

## • Characters of the C.S.F.

- 1- Appearance; clear watery fluid. If it becomes turbid this indicates meningitis.
- 2- It is **formed by choroid plexuses in the brain ventricles**
- 3- Amount, is about 120-150 ml
- 4- Secretion about 20 ml per hour

اليوتيوب د. يوسف حسين

# Ventricular system (lateral view)

## Ventricles of the Brain

Lateral ventricle

Interventricular foramen

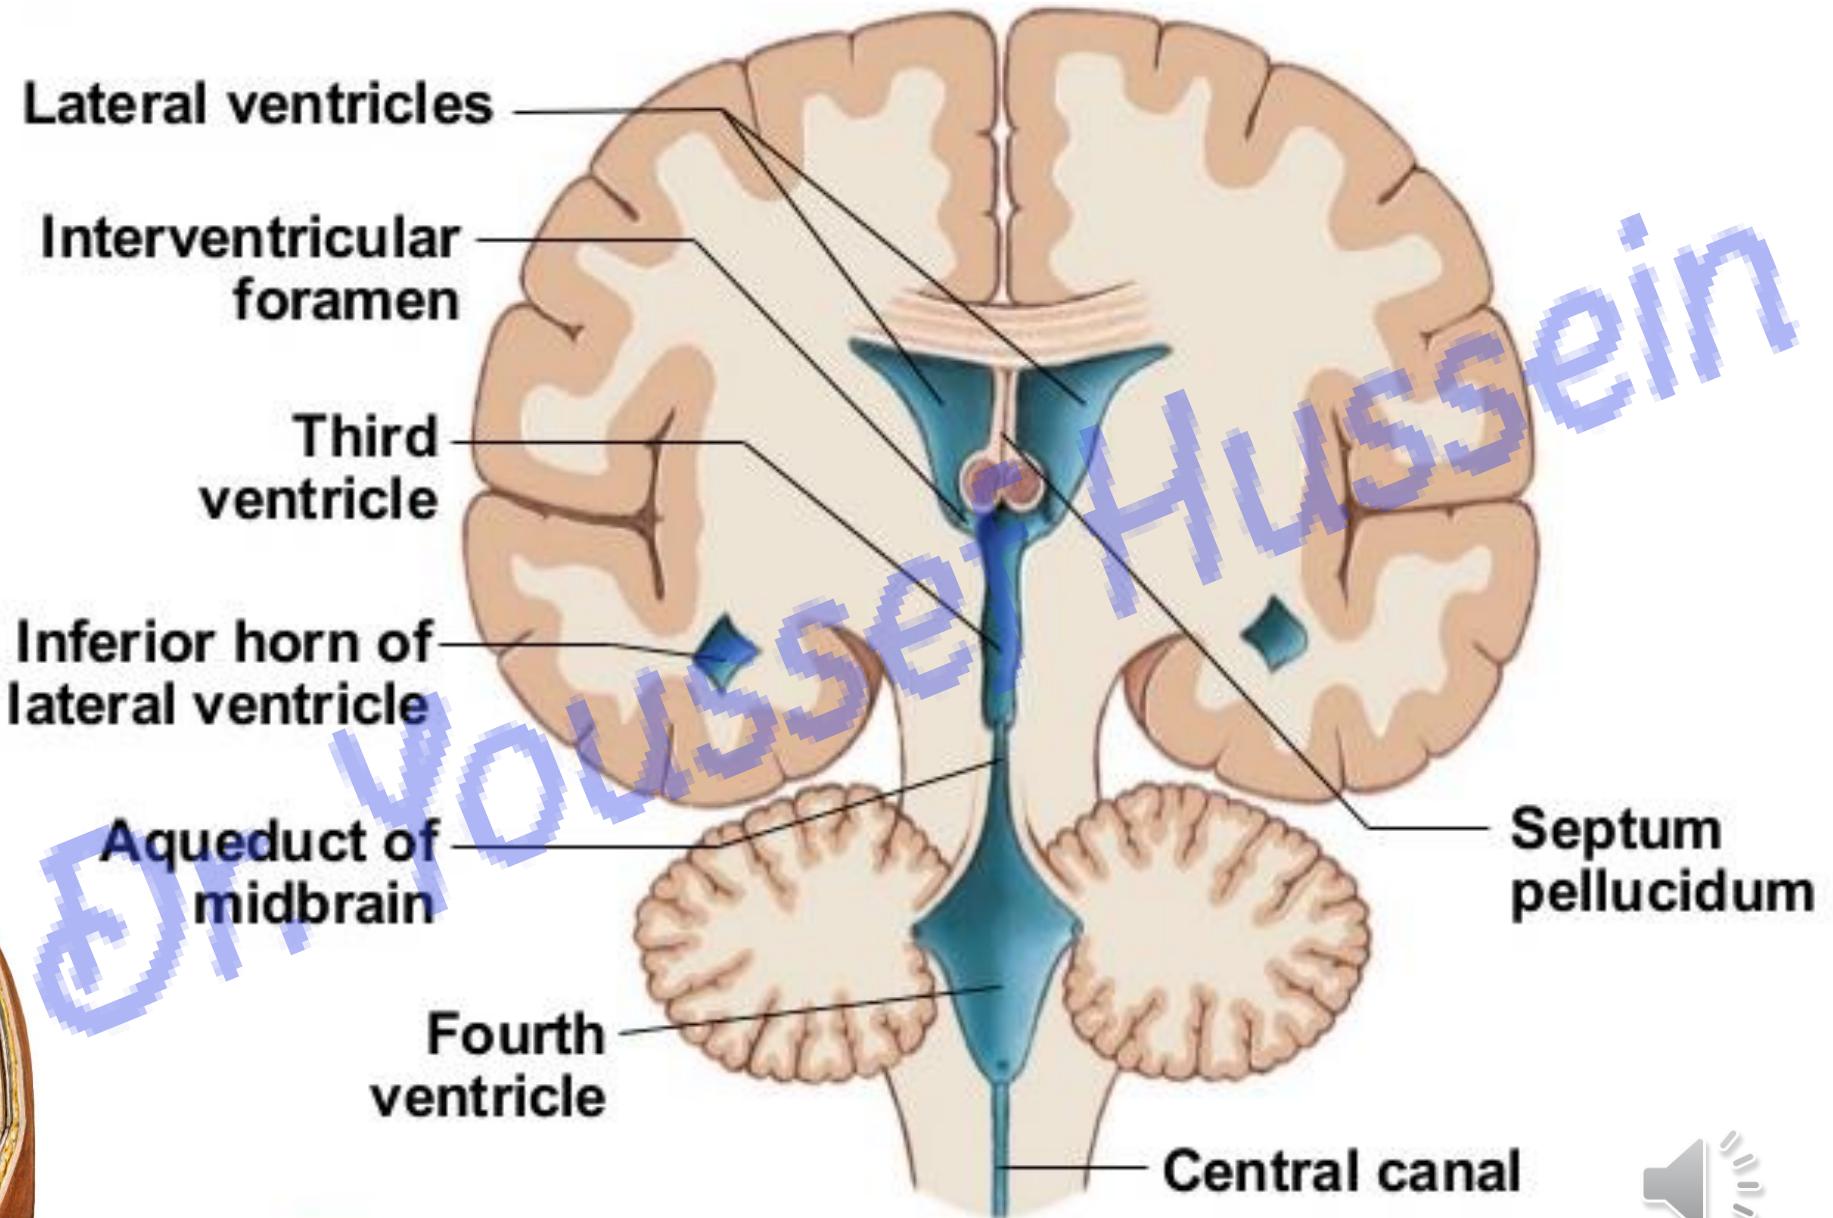

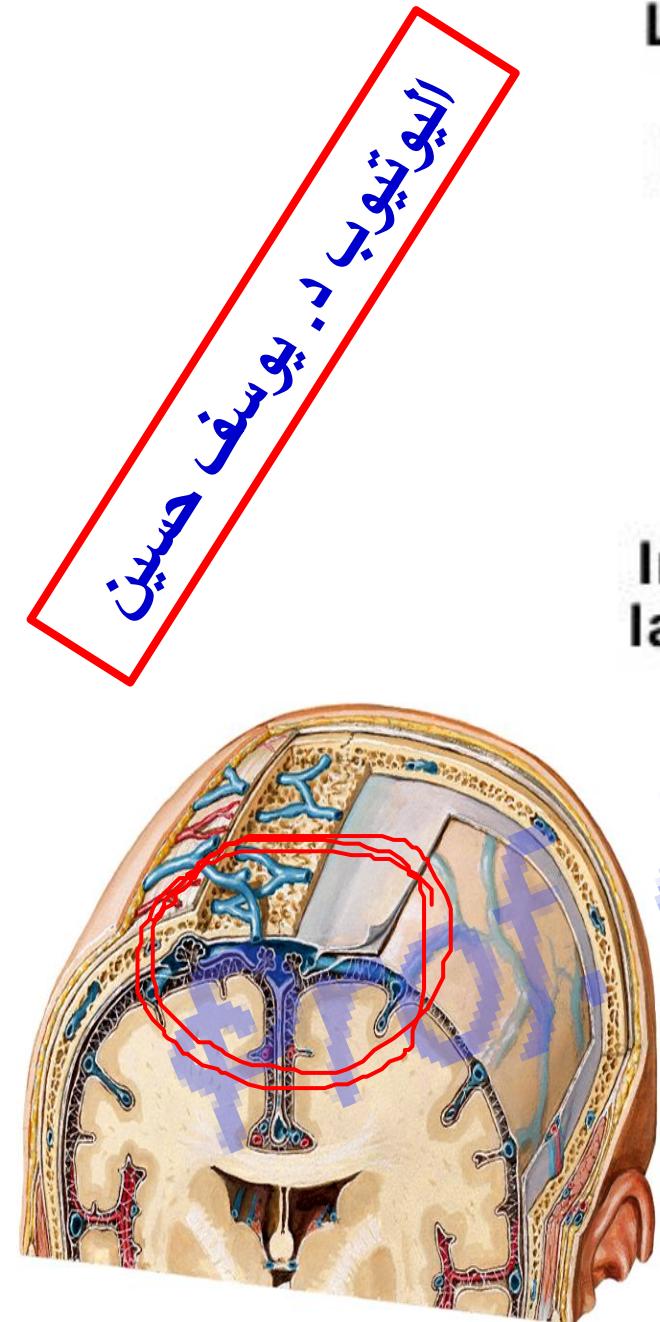

Third ventricle

Aqueduct of midbrain

Fourth ventricle

اليوتيوب د. يوسف حسين

**d** Diagrammatic coronal section showing the interconnections between the ventricles

## • C.S.F. Circulation

- C.S.F. is filtrated by the choroid plexus of the lateral ventricles on each side → interventricular foramina of Monro → 3rd ventricle (more C.S.F. is added by the choroid plexuses) → cerebral aqueduct of Sylvius → 4th ventricle (more C.S.F. is added by the choroid plexuses) → 3 apertures in the roof of the 4th ventricle (2 lateral foramina of Luschka and median foramen of Magendi) → subarachnoid space.
- Some of the C.S.F. passes down through the central canal of the closed medulla oblongata.

**3- Absorption;** C.S.F. was filtrated by arachnoid villi and granulations into the superior sagittal sinus.

**N.B:-** Pulsation of the large arteries present in the subarachnoid space, helping the circulation of the C.S.F.
