Lecture 8

Muscles of the neck

Done by :

Aya Ayman

Anatomy - lecture (8)

1. In which layer of muscle of the back is the spinalis muscle :
- A- Superficial extrinsic.
 - B- Superficial intrinsic.
 - C- Intermediate extrinsic.
 - D- Intermediate intrinsic.
 - E- Deep intrinsic.

Answer: D

- 2.Which muscle from the following responsible of lateral flexion of the head:

- A- Rectus capitis anterior.
- B- Rectus capitis posterior minor.
- C- Rectus capitis lateralis.
- D- Rectus capitis posterior major.
- E- Longus colli.

Answer :c

- 3.All of these muscles attached to axis except :

- A- Inferior oblique.
- B- Superior oblique.
- C- Rectus capitis posterior major.
- D- Scalenus medius.
- E- Longus colli

Answer: B

Anatomy - lecture (8)

4.Which of the neck can turn the face to the same side :

- A. Rectus capitis posterior major.
- B- Rectus capitis anterior.
- C- Rectus capitis posterior minor.
- D- Rectus capitis lateralis.
- E- Superior oblique.

Answer: A

5.When you rotate your head to the left side, which muscle is used :

- A- Trapezius.
- B- Levator scapulae.
- C- Infrahyoid.
- D- Right sternocleidomastoid.
- E- Left sternocleidomastoid.

Answer: D

6. One of these is an Intermediat muscle of extrinsic back layer:

- A) Longissimus capitis
- B) Serratus posterior superior
- C) Trapezius
- D) Latissimus dorsi
- E) Levator scapulae

Answer :B

Anatomy - lecture (8)

7. Lateral flexion of head is done by:

- A) anterior scalenus
- B) rectus capitis anterior
- C) rectus capitis lateralis
- D) scalenus minimis
- E) rectus capitis posterior

Answer:A

8. All of the following muscles take innervation from C1 except:

- A) rectus capitis lateralis
- B) scalenus posterior
- C) rectus capitis posterior minor
- D) rectus capitis posterior major
- E) longus capitis

Answer:B

9. Muscle that do lateral flexion of the neck

- A- rectus capitis anterior
- B- rectus capitis letralis
- C- scalenus posterior
- D- longus capitis

Answer:c
