Final Radiology

Done by:
Aman Abu Sakout

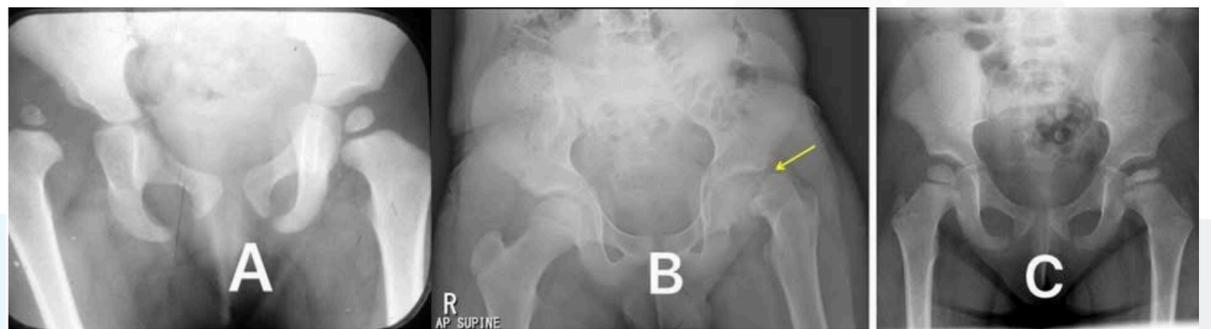

1) 70 years old male with dysuria , hesitancy, prior to spinal trauma .. all is true except ?

- A)there is trabeculated bladder
- B)neurogenic bladder
- C)there is diverticulum
- D)left sided vesicoureteral reflux.
- E)Elongated bladder

2) One is true regarding paediatric hip disease

- A)A is best diagnosed by frog leg position
- B)B is youngest than C
- C)C is perths disease

3) 70 years old male with abdominal distension, colicky pain,one weak of constipation,soft abdomen reducible with no hernia, virgin abdomen ..one is true ?

- A)LBO
- B)SBO
- C)Post op adhesion
- D)Sigmoid volovolus

4) Male patient with chronic history of alcoholism and DM, abdominal x ray shows all except ?

- A)alcohol is a risk factor with DM sequale
- B)Gastric body calcification
- C)pancreatic calcification

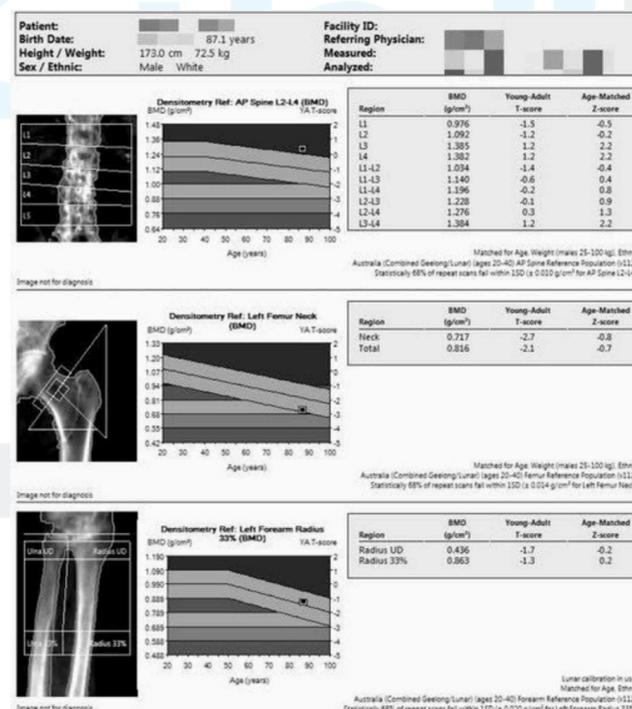

5) Pre and post contrast , most likely diagnosis ?

- A) Low grade glioma
- B) High grade glioma
- C) meningioma
- D) ICH

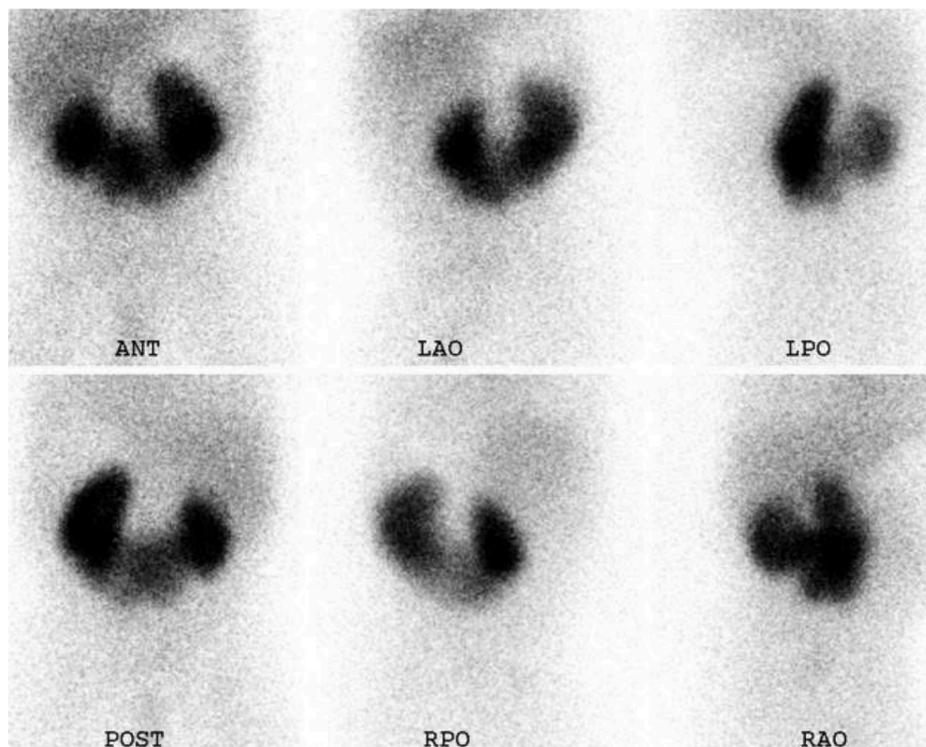

6) Patient 87 years old , One is wrong?

- A) Left proximal femur osteoporosis
- B) lumbar spine T-score is 0.3 (i.e. appears within normal limits) but is artificially elevated secondary to sclerotic degenerative endplate change
- C) left forearm osteopenic
- D) the patient left forearm and left femur is osteoporosis

7) multiple picture taken from anterior and oblique position , one is true ?

- A) Horseshoe kidney
- B) Right hydronephrosis
- C) Bilateral obstruction

8) Female patient with right loin pain , one is wrong ?

- A)it's a hourshoe kidney
- B)right hydronephrosis
- C)right kidney stone
- D)renal ureter can be illustrated in this view
- E)CT axial without oral or IV contrast

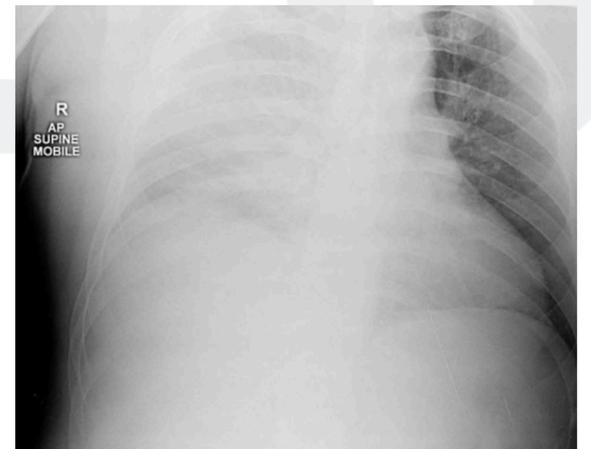

9) Female patient with right abdominal pain , one is true ?

- A)it's MRCP
- B)Gall bladder stone
- C)CBD stone

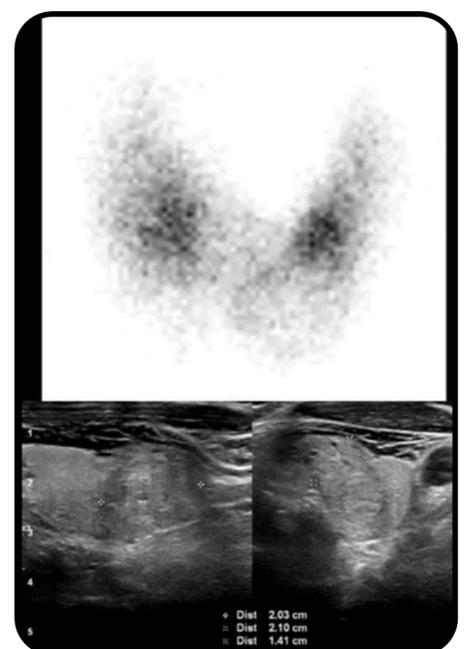

10) male patient with sudden chest pain after trauma , most likely diagnosis

- A)Hemothorax
- B)pleural effusion
- C)pneumothorax
- D)lobar collapse

11) 44 male with subclinical hyperthyroidism , high T4 , suppressed TSH , doing thyroid scintigraphy scan , axial longitudinal US for left lobe regarding this ultrasound for left lobe what's is true ?

- A)normal scintigraphy
- B)hot nodule
- C)cold nodule
- D)graves
- E)thyroid cyst

12) 1 month baby with abdominal pain, red jelly stool, one is wrong ?

- A) most common site for pathology ileocolic
- B) Can cause intestinal obstruction
- C) Barium enema halted in transverse colon
- D) Barium meal shows claw sign

13) what is the wrong ? (مثل نفس الصورة)

- 1) green stick fracture
- 2) no displacement....
- 3) colles fracture

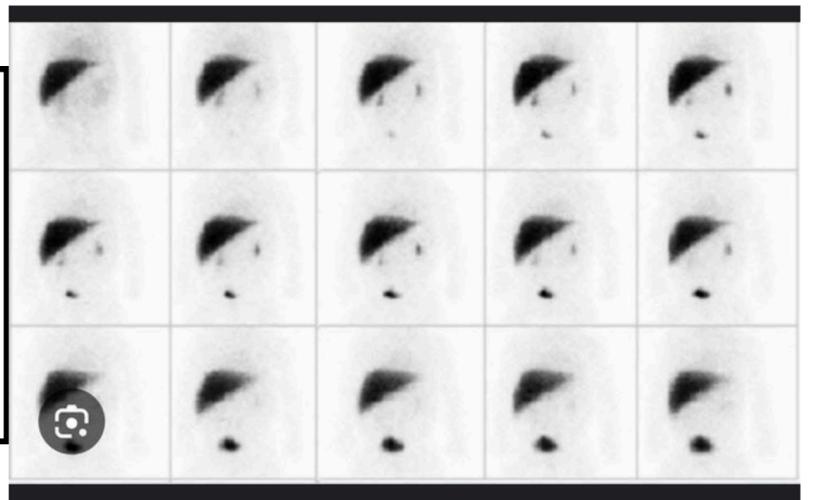

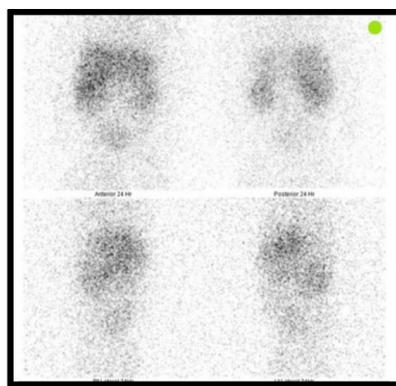

14) Lowest dose of X-ray ?

- A) chest X-ray
- B) bone scan
- C) cardiac stress test
- D) CT

13) Neonate with hyperbilirubinemia:

- A) biliary atresia
- B) CBD stone
- C) normal
- D) acute cholecystitis

16) patient with generalised abd pain and tenderness an abd us performed which of the following true :

- A) normal appendix
- B) positive appendicitis
- C) non compressable appendix seen in normal
- D) blind end indicate normal appendix
- E) wall thickness > 12

17) ascending urethrogram (retrograde)

A) descending UG

B) Stricture in bulbar urethra

C) intact post .U

مو متاكده من الخيارات

18) patient presented to the clinic with inguinal hernia

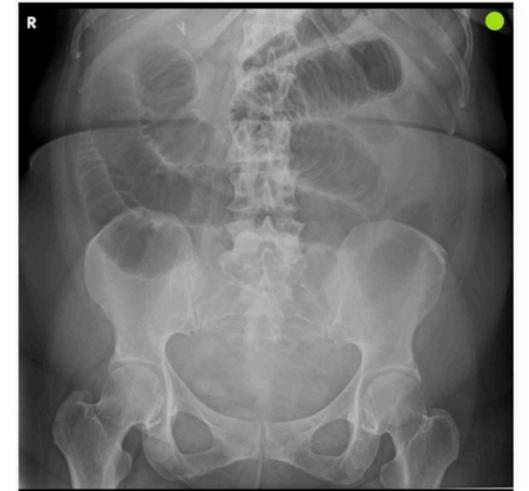

manual reduction is successfully performed. which one it's

true ?

A) SBO

B) LBO

C) mc cause post op adhesion

Case 35: distal small bowel obstruction

19) all the following true except

A) gallbladder stone

B) urinary bladder stone

C) fecal impaction in bowle

نسيت الخيار الغلط

20) Alcoholism and DM type 2 and has pancreatitis, choose incorrect:

A)chronic pancreatic clarification

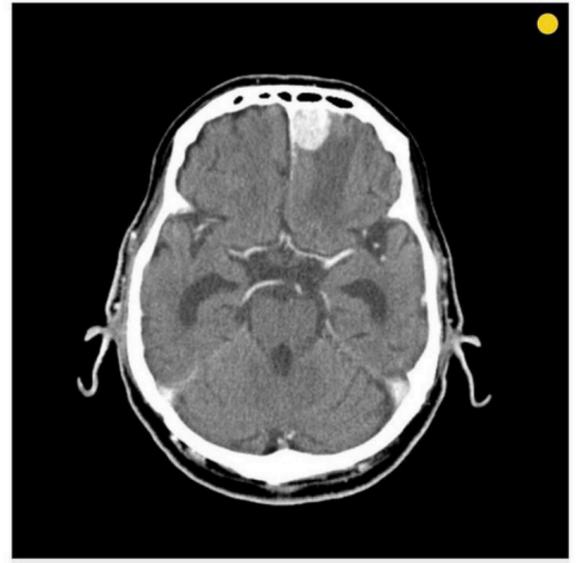

B) alcohol risk factor for this condition

C) gastric body calcification

21) nearly same picture

- A) low grade glioma
- B) high grade glioma
- C) ICH
- D) Meningioma

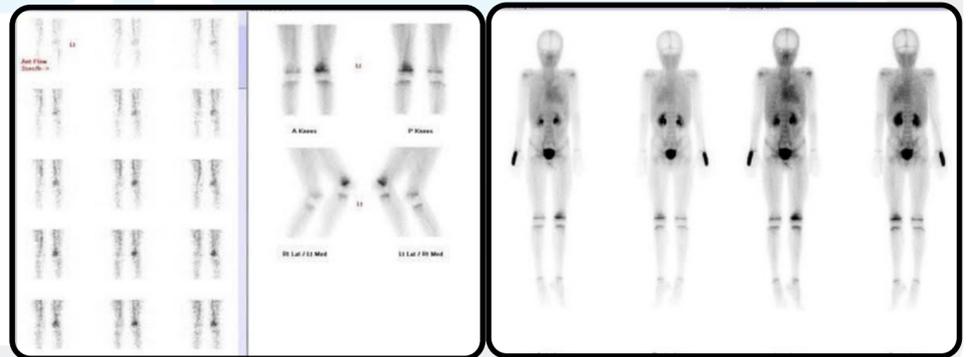

22) all true except:

- A) closed loop obstruction
- B) sigmoid volvulus
- C) large bowle obs
- D) supine position **

23) What is the diagnosis?

- A) osteoarthritis
- B) normal image
- C) Paget disease
- D) Osteomyelitis

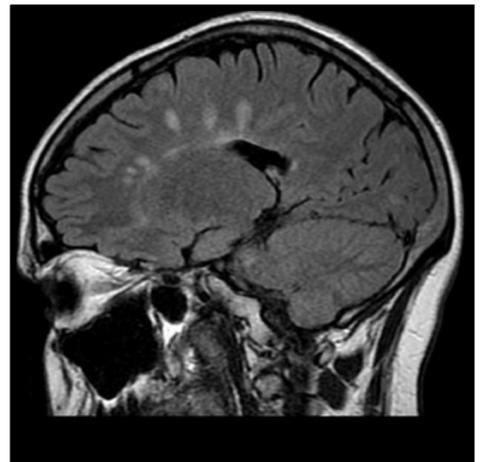

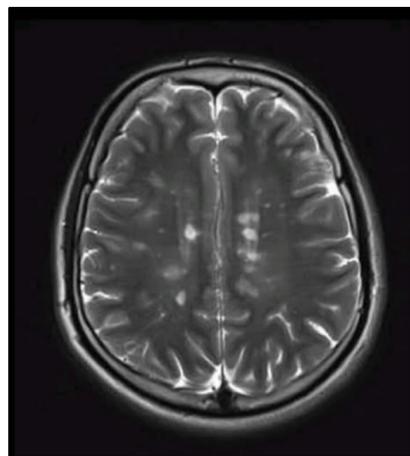

24) Pt with dysnea ,sudden chest pain on left side

- A) Emphysematous chest
- B) Pneumothorax

25) what is the diagnosis?

- A) MS

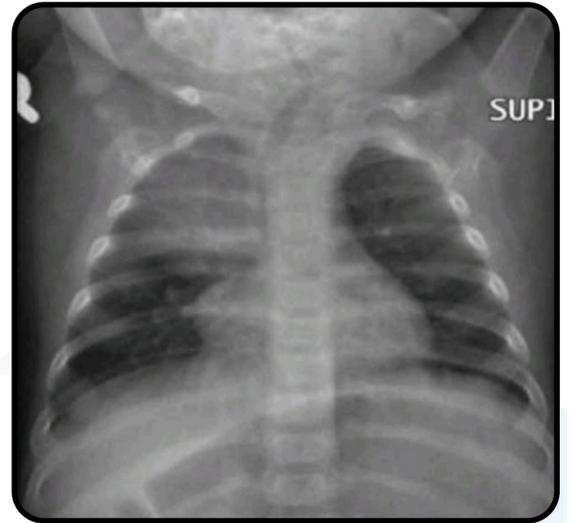

26) 80 ys old patient w/ reducible hernia?

- A) large bowel obstruction
- B) Volvulus
- C) Small bowel obstruction
- D) Obstruction due to adhesions

27) in this case neonate ?

- A) normal Chest XRay
- B) Rt middle lobe consolidation
- C) Rt upper lobe collapse
- D) Lt lobe pneumonia

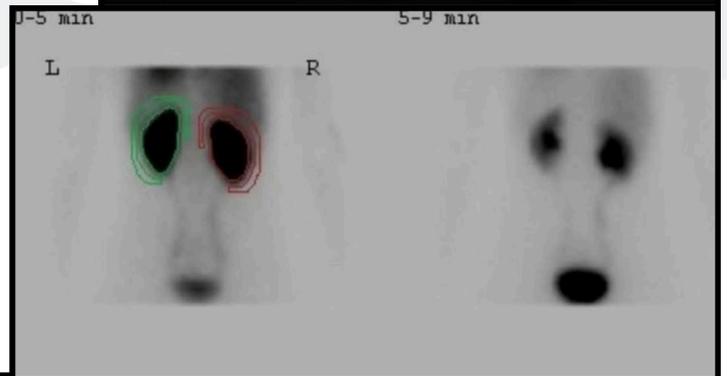

28) Choose the correct answer?

- A) MAG3 normal /us abnormal
- B) both of them normal
- C) both abnormal
- D) left kidney affected

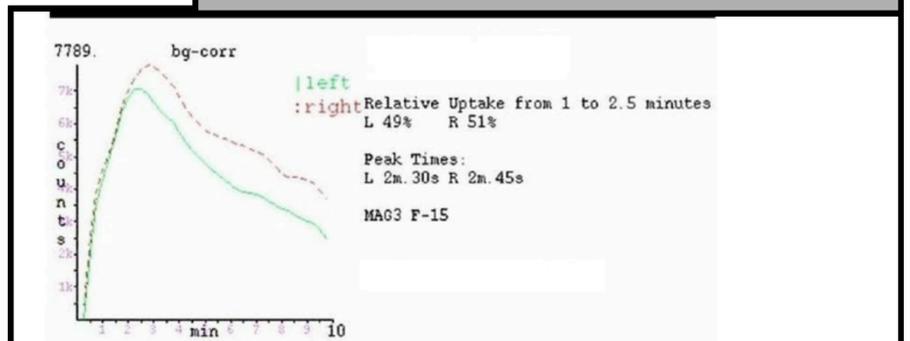

(A)

(B)

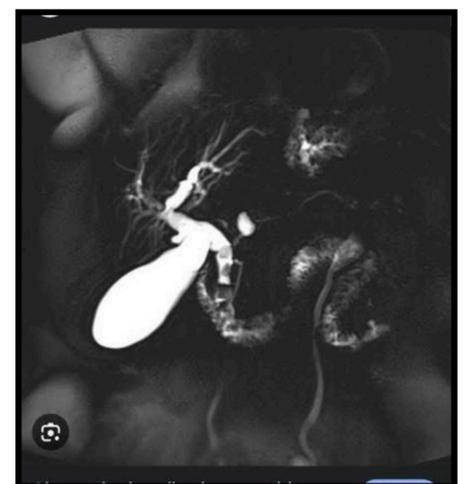

(C)

29) what is your diagnosis?

- A) cbd obs **
- B) ERCP
- C) GB stone

ICA infarction

Horseshoe Kidney

Meningioma

Pneumatosis intestinalis
