من شو بتكون ال acrosome؟
golgi apparatus
اي من التالي صحيح في يتعلق في acrosome؟
has outer and inner membrane
متى بدخل الدم على lacunae؟
باليوم 11
ال hydatiform mole شو الصح؟
blastula without inner cell mass
اشي زي هيك 🤔
متى بنتهي ا implantation؟
11-12
ايش هي ال capacitation؟
removal of glycoprotein coat
شو الغلط بالنسبه لل gastrulation
اتوقع كانت precede the primitive streak formation

(24.0K) **Haploid** **Both**) epidourethral gland
) prostate gland

Correct Which of the following cells are diploid?
A) secondary oocytes
B) secondary spermatocytes
C) primary spermatocytes
D) spermatids
Feedback: Correct Answer

Correct Final maturation of sperm cells occurs in the
A) epididymis
B) seminiferous tubules
C) prostate gland.
D) urethra
Feedback: Correct Answer

Correct Seminal vesicles produce
A) mucus during sexual arousal and exposure to cold
B) spermatozoa in the ductus deferens
C) secretions of secretions from the seminal vesicles
D) secretions of sperm cells from the testes into the epididymis
Feedback: Correct Answer

Undifferentiated spermatogenic cells are ca
A) spermatogonia.
B) primary spermatocytes.
C) secondary spermatocytes.
D) spermatids.
Feedback: Correct Answer

Sperm cells are stored primarily in the
A) vas deferens.
B) ejaculatory ducts.

servix.
vagina.
commonly called the egg, or ovum, is more correct

Haploid

CORRECT

Which of the following cells are diploid?

- A) secondary oocytes
- B) secondary spermatocytes
- C) primary spermatocytes
- D) spermatids

Feedback: Correct Answer

CORRECT

Final maturation of sperm cells occurs in the

- A) epididymis
- B) seminiferous tubules
- C) prostate gland.
- D) urethra

Feedback: Correct Answer

CORRECT

Seminal vesicles produce

- A) sperm cells.
- B) testosterone.
- C) fructose-rich fluid.
- D) estrogen.

Feedback: Correct Answer

UNANSWERED

The normal number of spermatozoa per milliliter of seme

What we commnly know as egg or ovum is actually called

2ry oocyte

One of the following is wrong in relation to gasturulation

During this stage primitive streak is formed

👍 1

Like

Comment

Like

Comment

- A) elevate the testes during sexual arousal and exposure to cold
- B) generate peristaltic waves in the ductus deferens
- C) control the release of secretions from the seminal vesicles
- D) control the release of sperm cells from the testes into the epididymis

The form (stage) of developing male gamete located nearest to the basement membrane is

- A) spermatid
- B) primary spermatocyte
- C) secondary spermatocyte
- D) spermatogonium

Feedback: Earliest stage.

Leydig cells are located

- A) in all the male accessory reproductive organs.
- B) interspersed among developing sperm cells in seminiferous tubules.
- C) lining the epididymis and ductus deferens.
- D) in spaces between adjacent seminiferous tubules.

Feedback: Correct Answer

The immune system does NOT normally attack spermatogenic cells because

- A) they are recognized as "self" structures.
- B) they do not have any antigens on their cell membranes.
- C) spermatogenic cells are protected by the blood-testis barrier.
- D) the acrosome covers any antigens that would be recognized as foreign

Feedback: Correct Answer

The process of crossing-over and recombination of genes occurs during

- A) meiosis I.
- B) meiosis II.
- C) spermiogenesis

1
