

# Ankle joint

<b>From where</b>	<b>Ankle joint</b>
<b>Type</b>	Synovial
<b>Variety</b>	Hinge ( the result: the shape of articular surface)
<b>Articular parts</b>	<p>Above:</p> <ul style="list-style-type: none"> <li>- Inferior surface of lower end of tibia,</li> <li>- Inner surface of medial malleolus,</li> <li>- Inner surface of lateral malleolus</li> </ul> <p>Below: talus</p> <ul style="list-style-type: none"> <li>- Superior surface of trochlea of talus</li> <li>- Comma shaped surface for med. Mall.</li> <li>- Triangular surface for lat. Mall.</li> </ul>
<b>Capsule</b>	attach to margins of articular surface. Thin in front , back thick on sides
<b>Synovial membrane</b>	line the capsule
<b>Ligaments</b>	1-medial collateral (deltoid) lig. 2-lateral collateral lig.
<b>Relations</b>	<p>Anteriorly</p> <ul style="list-style-type: none"> <li>- Structures deep to the extensor retinacula           <ul style="list-style-type: none"> <li>1-Tom: Tibialis ant.</li> <li>2-Has: ext. hallucis longus</li> <li>3-Very: ant. tibial vessels</li> <li>4-Nice: ant. tibial n.</li> <li>5-Dog: ext. digitorum longus</li> <li>6-&amp; Pigs: peroneus tertius</li> </ul> </li> </ul> <p>posteromedially</p> <ul style="list-style-type: none"> <li>- Structures deep to the flexor retinaculum           <ul style="list-style-type: none"> <li>1-Tom: Tibialis post.</li> <li>2-Does: flexor digitorum longus</li> <li>3-Very: post. tibial vessels</li> <li>4-Nice: post. tibial n.</li> <li>5-hats: flexor hallucis longus</li> </ul> </li> </ul> <p>Posterolaterally</p> <ul style="list-style-type: none"> <li>- Structures deep to the peroneal retinacula</li> <li>- Tendons of peroneus longus &amp; brevis</li> </ul> <p>posterior</p> <ul style="list-style-type: none"> <li>- Tendoachilis</li> </ul>
<b>N.S.</b>	Ant. & post. Tibial nerves
<b>Movements</b>	<ul style="list-style-type: none"> <li>- only dorsiflexion &amp; plantar flexion <b>But Eversion &amp; eversion occur at tarsal joints</b> <ul style="list-style-type: none"> <li>- Dorsiflexion (extension): by               <ol style="list-style-type: none"> <li>1. tibialis ant</li> <li>2. extensor hallucis longus</li> <li>3. extensor digi longus</li> <li>4. peroneus tertius</li> </ol> </li> <li>- Plantar flexion (flexion) : by               <ol style="list-style-type: none"> <li>1- gasterocnemius</li> <li>2- soleus</li> <li>3- plantaris</li> <li>4- tibialis post.</li> <li>5- flexor hall. Longus</li> <li>6- flexor digi longus</li> </ol> </li> </ul> </li> </ul>

# The ligament in the ankle

From where	medial collateral (deltoid) lig.	lateral collateral lig
Char	-One of the strongest ligaments in the body -Triangular in shape	Weaker
Attachment	Apex : - medial malleolus Base: - tuberosity of navicular bones - Plantar calcaneo navicular (spring) ligament - neck of talus - Sustantaculum tali - Body of talus	- 3 bands 1. calcaneo – fibular lig : From : tip of lateral malleolus To : lateral surface of calcaneus  2. ant. talofibular lig : From : ant. border of lateral malleolus To : neck of talus  3. post. talofibular lig : From : malleolar fossa of lateral malleolus To : posterior tubercle of talus
Function	1- prevent over eversion of foot 2- maintain the medial long. Arch of foot	

## Joints of foot

From where	1- subtalar joint	2- TALOCALCANEONAVICULAR joint
Type	Synovial	Synovial
Variety	Plane	Ball & socket
Articular parts	- lower surface of body of talus  - upper surface of calcaneus	a- Ball:- is formed by the head of the talus.  b- Socket:- is formed by - navicular bone, -upper surface of the spring ligament, (which extends from sustantaculum tali to navicular bone it support head of talus ) -sustentaculum tali, -superior surface of the calcaneus
Movements	1- Inversion -medial rotation of the foot so the sole looks inwards - It is done by a) Tibialis anterior  2- Everson: -Lateral rotation of the foot so the sole looks outwards -It is done by a) Peroneus longus. b) Peroneus brevis.	b) Tibialis posterior.  c) Peroneus tertius.

# Tibifibular joints

From where	1- superior tibiofibular	2- middle tibiofibular	3- inferior tibiofibular
Type	synovial		Fibrous
variety	plane		
Articular parts	- Head of fibula - Fibular facet on lateral condyle of tibia		- Rough area on medial side of lower part of fibula - Fibular notch on lower end of tibia
Movements	sliding		no
